HIGH VOLTAGE SILICON RECTIFIER ASSEMBLIES

Voltage Ratings to 208 KV in a single channel. Three Phase Current Ratings to 510 Amperes. Westinghouse Silicon Rectifier Stacks have proven their outstanding reliability in over 50 million stack hours of failure free operation. Each cell is shunted with a capacitor and resistor which provide the optimum in steady state and transient voltage division. The design of the stack provides for cooling by oil, free or forced air convection and vapor atmospheres. Where required, assemblies can be supplied with mil-type capacitors and resistors which combined with the high temperature characteristics of the hermetically sealed silicon rectifier cells, allows operation in ambients up to 110°C. Use of these stacks in place of vacuum tubes will increase equipment efficiency by as much as 25%.

Listed are maximum voltage and currents for single assemblies. Stacks can be combined in series or parallel.

PRV	1 ϕ FW I_{DC}	3 ϕ FW I_{DC}
208K	3.0	4.5
83.2K	12.0	18.0
83.2K	19.0	28.5
41.6K	31.0	46.5
14K	112.0	168.0
21K	210.0	315.0

Ratings are based on forced air cooling of 1000 l fpm at 25°C ambient.
Oil cooling will increase ratings.
Assemblies are designed to meet most standard military environmental conditions.
For very high voltage applications, corona shielding is available.
Where voltage will allow, entire rectifier assemblies can be packaged in one channel.

This new Alcoswitch Series fills a need for those who want the best product possible at an optimum price. Similar in appearance and specs to the Alco "E" Series but without the waterproof feature. Has the important features wanted in a good miniature: turret terminals, extra-wide contacts, heavier current capabilities, low-loss, high heat and high impact case construction. "No Tear" shoulder on bushing. Overall dimension allows use in tight quarters. Rated 6 amps @ 125 VAC.

The new "E" Series has the most-wanted features in miniature switches. Waterproof 'O' rings are located inside the toggle and on the shoulder. A mechanical shoulder on the bottom of the bushing prevents "tear-offs" when a single mounting nut is employed. High voltage barriers between terminals inside as well as outside. Case has a new, superior plastic material capable of withstanding a higher impact; guards against accidental damage. Low-loss case has extremely high resistance between terminals and case ground, and its high temperature coefficient is ideally suited for prolonged soldering and printed circuits. Turret type terminals are used for simplified wiring or for P.C. Extra-wide, solid silver contacts are bonded, not riveted, on copper-silver plated terminals. Long-life cycle over 100,000 On-Off operations at operating conditions (SPDT). Rated 6 amps @ 125 VAC.

Mustang

The Mustang Series is for designers who prefer the feel of a larger toggle switch but have space limitations behind today's compact panel. The familiar ultra-miniature Alcoswitch ½" case is utilized, however the Mustang mounting requirements are the same as the larger switches with 15/32" bushings. This new Alcoswitch concept is a behind-the-panel space-saver in all Mustang models and it is especially true in the 3 Pole and 4 Pole Series where non-miniature switches are bulky in size. The Mustang switches have the most-wanted features as itemized in the "E" Series story (at left) with the exception of the waterproof 'O' rings. The case construction is of low-loss, high impact and high temperature materials with turret terminals and bonded silver contacts. Rated 6 amps @ 125 VAC.

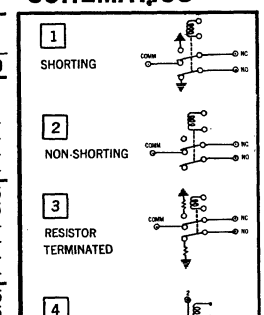
SCHEMATICS



NOTE: High frequency electrical characteristics are typical values (not maximum) as measured in a 50 ohm circuit and may be used for most design analyses. For more exacting applications, maximum values in the frequency range may be obtained upon request. SWR measured to common with a matched 50 ohm termination. **For additional specifications request Amphenol RF Switches Catalog SS-1.**

AMPHENOL™

HIGH ISOLATION MICROWAVE SWITCHES

DESCRIPTION

These compact coaxial switches, with superior isolation characteristics over its entire zero to 12.4 GHz operating range, are particularly suitable in applications where crosstalk interference must be kept to an absolute minimum.

Amphenol's Series 303 units described here represent a few of the variations available. Other connector types, auxiliary contacts, and hermetically sealed units as well as transfer types in both the miniature and standard sizes are also available. Please contact us for additional information and specifications.

Note – The values shown for multi-pole switches are amperes per pole except for motor load. See ● below.
Note – Current ratings are established at 77° F.
Note – All current ratings good to 50,000 ft. altitude. For higher altitude check local C-H office.
Note – AC current values good for frequencies from 50 to 400 cycles (except "▲" in Col. 25 is 20 amp. at 50-60 cycles)
*Momentary contact.
¢ These figures are maximum current ratings for 10,000 operations. Longer life (more operations) can be expected when operated at less than rating of switch.
●Motor load values for multi-pole switches are held on all poles of switches being connected in motor circuit and motor stalled current not exceeding 300% of normal running current.

Experience has shown that for voltages not in excess of 250, the current rating of aircraft switches is inversely proportional to the voltage. If the voltage is doubled, the rating is halved.

Therefore, if the 125 volt a-c rating of a switch is known, it follows that on 200 volt ac, the current rating is 125 200 of 62.5% of its 125 volt ac rating.

This rule also applies to two or four pole switches used on polyphase systems. Cutler-Hammer aircraft switches carry per pole ratings and if the current and voltage handled by each pole is known, different rating combinations can be worked out.

A double pole switch, has at least twice the rupturing capacity of one of its poles because there are twice the number of breaks in the circuit. Its life is only slightly more than that of one pole because breaks are not simultaneous. The first pole or break handles twice its normal rating resulting in rapid erosion of contact material.

MAGNETIC PROXIMITY SWITCH

For Counting Position Limiting Sequence Control Mounts in Any Position

Precision, fast acting, suitable to sequential control functions on machine tools, packaging, material handling and similar industrial devices.

Strong, encapsulated, assures freedom from contamination by cutting oils, dust, powder, chips, etc. Operates up to hundreds of millions of cycles — temperature range −30°C to +105°C. Speed (Max) 200 cycles/sec repeatability within .005".

Switch actuates when brought into proximity with ferrous metals or other magnetic materials. No mechanical linkage necessary for operation. Operating sensitivity in nom. ⅛" make, ½" break. Switch elements sealed in glass, unit is potted in epoxy resin. Case is impervious to oil, water, gas, all common solvents.

Typical actuators include indexing tables, cams, wheels, push rods, die sets, line objects such as food and beverage cans, components, parts, vehicles, rotating and swinging objects, etc.

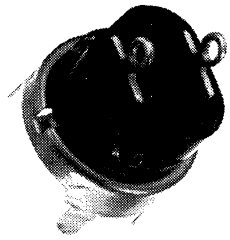
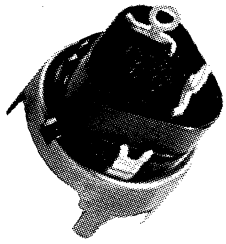
IRC-CTS EXACT DUPLICATE POWER SWITCHES

IRC, DIVISION OF TRW INC.

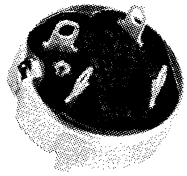
Exact duplicate replacements for pull-on, push-off power switches used on CTS 45 series controls. The quickest, most reliable switch replacements. Easy to install — eliminates double work of removing switch from cover and reinstalling. Prevent costly call-backs on universal adaptations.



TK-1. Latest development of original CTS TK switch. Uses new molded actuator for greater fatigue strength. Mounted on two-tap switch cover for use on CTS 45 series controls ($1\frac{5}{16}$" diameter) without element tap or with either one or two element taps. Replaces TK switch only — not used for replacement of original K switches.

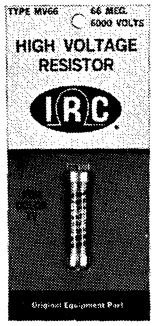


AK-1. Up-rated and improved replacement for CTS K switch. Rated at 5 amperes instead of 3 amperes to withstand heavy surges found in some applications. Mounted on two-tap cover for use on CTS 45 series controls ($1\frac{5}{16}$" diameter) without element tap or with one or two element taps. Replaces K switch only — not used for replacement of original TK switches.



WFR. A reverse-action double pole, single throw switch for bracket-mounting on CTS 45 series controls to provide pull-on, push-off switch action. Switch element only — mounts on original bracket by bending over three labs.

HIGH VOLTAGE RESISTORS FOR COLOR TV



Attractive new SNAP PAK style package. Back of card contains complete replacement information.

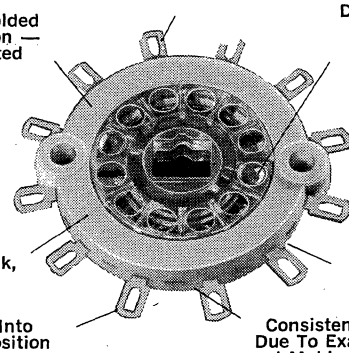
Switch Wafers Assembled Without Spacers



SELECTOR SWITCH UNIQUE 1-PIECE MOLDED WAFER PROVIDES HIGH RELIABILITY

The new IRC-CTS design goes right to the heart of selector switch reliability . . . the wafer. Automated manufacture provides unprecedented uniformity. One-piece *molded* construction of the wafer virtually eliminates drift. In each production run, all switches are identical, terminal placement is exact and permanent. Machine exactness replaces human error and variation, eliminating wide tolerances and assuring high reliability.

- Compact 1 1/16" size design allows more circuitry per unit of depth behind panel.
- Rivet-free construction permits closer stacking.
- Superior insulation due to repetitive exactness in terminal spacing, and molded glass alkyd material.
- Rotor contacts are double-wiping and self-cleaning.
- Stator contacts are integral with terminals.
- Molded stator will not break or crush during ordinary handling, or if it is dropped.

212 Wafer Assembly

The wafer assembly of the IRC-CTS selector switch can be separated into three basic elements, the rotor insulator, the rotor contacts and the stator. The stator consists of the stator insulator, terminal lugs, contacts, contact ring, which is made as a single unit.

The Stator

The Stator is the heart of the IRC-CTS selector switch and determines the circuitry of the switch in conjunction with the location of the selected rotor contacts. The stator is actually a circuit pattern cut out of metal which forms the terminal lugs, center contact ring and the stator contact.

Stator Insulator

The stator insulator is a circular molding which encloses the mid portion of each contact and serves as a container for the rotor. The stator insulator also serves as a natural solder and flux barrier, thus protecting the contact areas.

Rotor

The rotor of the IRC-CTS selector switch holds the rotor contacts in place and carries the contacts from one position to another, providing controlled float which prevents open circuiting during severe shock or vibration.

Contact Resistance

Circuit resistance ranges from .007 to .008 ohms on standard switches when measured from one terminal to an adjacent terminal. When measured terminals are not adjacent, up to 180° apart, the resistance will measure higher due to the extra metal in the stator circuits. It is to be noted that the circuit resistance check measures all the metal in the circuit. Thus actual resistance at the point of contact is considerably less than the measured resistance. In IRC-CTS assemblies, contact resistance is unusually stable throughout the switch life.

Contact Life:

Standard brass silver plated rotor contacts and brass silver plated stator provide reliable life for a minimum of 25,000 cycles through 12 positions and return without appreciable increase in contact resistance. (See detent life.)

Detent Rotational Life:

The standard 212 detent assembly (T79, T80, T81 & T82) has a rated life of 25,000 cycles through 12 positions and return.

The star wheel detent mechanism (T180, T181, & T182) has a rated life of 100,000 cycles through 12 positions and return.

J-B-T

TOGGLE SWITCHES — HEAVY DUTY

J-B-T INSTRUMENTS, INC. 30th Year

WHY IT PAYS TO SPECIFY J-B-T TOGGLE SWITCHES

• **J-B-T** concentrates on trouble - free switches. Among the four groups of toggle switches J-B-T produces more than 170 models made to Government Specifications. Market studies indicate that while these switches are a must in military applications, almost half are produced for non-military use where the principal requirement is dependability. J-B-T apparently is specified because:

1. **Materials are good.** For instance, in MIL and AN heavy duty models, J-B-T uses generous proportions of selected silver alloys in integral construction for contact surface areas — to add overload protection, dissipate heat, and keep contact resistance under .005 ohms.
2. **The design is good.** All MS models have silicone rubber bushing seal for sand, dust and 15-foot head of water submersion tests. Medium-duty types MS25098 and MS25100 also feature case-to-terminal sealing and a new design which provides fast break and wider gap to surpass the 125 VDC endurance tests of MIL-S-3950C.
3. **The value is good.** The many features required to meet Government standards, and J-B-T's rigid in-plant testing pay off in long, useful life. Nevertheless, because J-B-T makes **only** quality switches, quantity production permits a surprisingly small price differential over run-of-the-mill brands.
4. **Deliveries are comparatively good.** See your distributor. Production is scheduled to back up his stocks with factory inventory of finished switches and work in process to meet predictable demand.

TOGGLE SWITCHES — MEDIUM DUTY & CROSS-REFERENCE

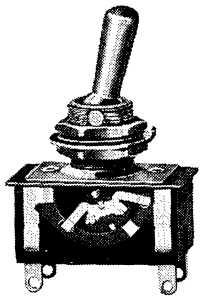
J-B-T INSTRUMENTS, INC.

SINGLE & DOUBLE POLE — GOVERNMENT QUALITY

Series MS25098 and MS25100 to MIL-S-3950C; Series ST12-27 to JAN-S-23, MIL-S-21195A (Ships), or DDAX Drawings



Cut-away view showing self-wiping double-grip contacts

• **MEDIUM DUTY** describes the current-carrying capacity — nominally 6 amp. at 125 VAC, 3 amp, at 250 VAC — rather than the life characteristics. Self-wiping heavily silver plated double grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100 — Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950C. For example, after 20,000 cycles of operation at 65,000' altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

OUTSTANDING 4-POLE SWITCHES TO MS25068 REQUIREMENTS

• There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS25068.

Equally important, J-B-T uses generous proportions of selected silver alloys in integral construction for contact surface areas — to add overload protection, dissipate heat, and keep contact resistance under .005 ohms. The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty J-B-T MS switches. Dimensions same as MS35059 except bodies including terminals: 1-11/32" long, 1-9/16" wide, 1-9/32" deep.

UL-marked types are not regularly stocked but only are manufactured in substantial production runs.

DRAWINGS FOR SUB-MINIATURE TOGGLE SWITCHES ON NEXT PAGE

JMT SERIES dimensions and details are shown below.
MPC SERIES is identical with JMT series except that solid terminals are provided for direct insertion in a printed circuit board. For details on MPC terminals, see drawing at right. To obtain MPC model number, substitute MPC for JMT; example: JMT-121 becomes MPC-121. Complete dimensions and model numbers are available on drawings SK-166 through SK-169.

PC1 SERIES can be provided where it is necessary to mount the switch at right angles to the circuit board. A two-prong bracket and attached terminals necessarily add to the cost.

NOTE A — Dimensions shown apply to standard terminals with holes. MPC series solid-terminals to be inserted in a printed circuit, are slightly larger as shown by configuration drawing at right.

Group IV

SERIES JMT, MPC, AND PC1; A BROAD LINE OF SUB-MINIATURE TOGGLE SWITCHES MANUFACTURED IN CONNECTICUT BY J-B-T

MANUFACTURED IN J-B-T's spanking new plant, the sub-miniature types illustrated on this page make up the firm's fourth and newest group of toggle switches. Series JMT combines drastic reduction in size and weight with the trouble-free construction built into standard-size J-B-T switches. Widely used in manually controlled, low-current, solid-state devices and miniaturized circuitry of computers, instruments, space, geophysical, and test apparatus, these tiny switches also have application in aircraft, communications, and electronic equipment, and portable products.

Made with a distinctive GREEN BODY (bright color on some models, forest green on others) single-pole types are ¼" thin, double-pole types less than ½" square, 3-pole and 4-pole types correspondingly small. All use single-hole mounting with ¼" threaded bushing which will not turn or work loose in the J-B-T surface plate. Stringent in-plant controls assure terminals that are firmly staked and will withstand repeated soldering. Terminal holes on JMT Series accept up to three #22 wires. Terminal configuration for MPC Series (printed circuit type) is shown on opposite page.

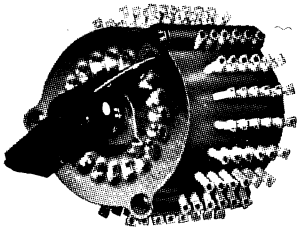
MULTI-POLE AND LEVER TYPE SWITCHES

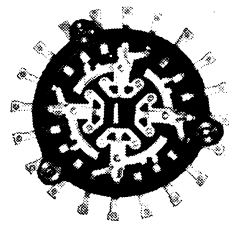
J-B-T INSTRUMENTS, INC. 30th Year

IMPROVED MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

• Superior Molded Material • All Models Bonded & Ruggedized • Panel Seal Available



Front View Showing Panel Locator which is Normally at 3 o'clock Position.



Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M- Series is ¼" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M- offers these additional features:

1. **Increased Versatility of Circuitry** — up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities** — by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device;**
4. **Extended Switch Life** — new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **All 20M- Models are Bonded and Ruggedized Construction;**
6. **Radial Alignment of Multi-Pole Contact Surfaces** — by means of newly-designed double-ball detent with diaphragm-type springs.

VARIATIONS OF 20M- — Please request SK-142, Revision of March, 1967, or later for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of **shorting and non-shorting contacts for each deck** may be made. **Fixed stops** are built-in but may be altered for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact** (suffix R) may be specially ordered.

PANEL SEAL PS20M- SERIES — Sealed shaft and bushing meet the requirements of MIL-S-3786B for sealing. For details ask for SK-143, Revision of March, 1967, or later. The seal (prefix PS) adds $1.75 per switch to catalog price.

LEVER ACTION SWITCHES — 6, 5, 4, 3, and 2-Position — LAMINATED, MOLDED, & SUB-MINIATURE

LAMINATED 3- AND 4-POSITION, POSITIVE INDEXING. These lever switches are derived from the J-B-T SS-14 instrument-type rotaries. Specified for tube checkers, inspection equipment, communications systems, control consoles, and other uses where quality is important. 4-position types are interchangeable with 3-position except in length of throw (1" slot for 3-position, 1⅜" for 4-position) — mounting holes for boxed switches come with mounting hardware and KN-17 knob as illustrated; bulk shipments, without knobs. **SINGLE DECK**- spacing between centers: recommended, ¾"; minimum, 9/16". **TWO DECK**- spacing: recommended, 15/16"; minimum, 13/16". ⅜" between decks matches TV twinlead wires. **SPRING RETURN TYPE**- single deck, 3-position switches may be ordered with spring return. Lever returns to position 11*, giving momentary action at positions 9* and 10*. For dimensions on all SS-14-IL series switches, ask for drawing SK-138.

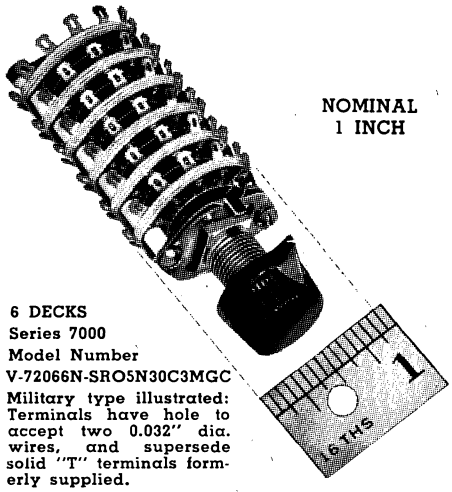
SERIES 7000, FULL 12 LIVE SWITCHING CONTACTS PER DECK; SERIES 5000, UP TO 8 POLES PER DUAL-DUTY DECK.



6 DECKS
Series 7000
Model Number
V-72066N-SRO5N30C3MGC
Military type illustrated: Terminals have hole to accept two 0.032" dia. wires, and supersede solid "T" terminals formerly supplied.

- **Precision built for Low-Current Usage where Size, Weight, Reliability are Important**
- **Unusual Versatility — More Contacts per Deck**
- **Accelerated Snap-Action Detent**
- **MIL Materials Throughout for Military & Non-Military Applications**

CAUTION— MIL-S-3786B, a sophisticated specification, spells out more than one performance level in each of several categories such as Temperature-Life, Vibration, Shock, and Altitude. Each level is designated by its own symbol. J-B-T SRO5 models meet an exceptional number of levels.

- **USES — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.**

TWO BASIC SERIES — Full 12 live switching contacts per deck are available in **Series 7000** using a patented wafer design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.

Up to 8 poles per dual-duty deck are available in **Series 5000** which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.

THREE ROTARY TYPES — Both Basic Series are made in 3 types: **MILITARY STYLE SR05,** numbered for specific performance levels of MIL-S-3786B; **V TYPE,** of similar construction to SR05, but not ordinarily subjected to full military test procedures; and X TYPE, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military devices where requirements are similarly exacting.

LEVER SERIES (L Types) — Outstanding design known as VL-7000 or VL-5000 Series, 1 to 4 decks. Illustrated on a preceding page.

KNOBS — Supplied with individually boxed switches on V and X types; not supplied on SR05 because separate military specification applies.

DIFFERENCES BETWEEN SRO5 MILITARY, V, and X — Switches other than X types use extra rugged index mechanisms and rotor construction.

REMARKABLE NEW 12 POSITION ROTARY SWITCHES

30th Year

J-B-T INSTRUMENTS, INC.

V/M SERIES 12-POSITION ROTARY SWITCHES
ULTRA-HIGH QUALITY WITH ADJUSTABLE TORQUE DETENT

This unusually fine family of fully enclosed rotary switches is being produced in J-B-T's thoroughly modern new plant. Used in precise laboratory test apparatus, test set-ups, telemetering, meter switching, calibration operations and similar applications where circuit stability is essential to accuracy and repeatability. The V/M Series virtually eliminates the influence of extraneous factors to the circuitry, and the initial electrical and mechanical characteristics remain substantially unchanged throughout the long useful life of the switch.

SPECIFICATIONS (Apply only to VMCS7 Models with coin silver contacts and rotor blades.): **Initial Contact Resistance,** .002 ohms; **Maximum Inductance,** less than .03 microhenry; **Capacitance between Segments,** less than 2 PFD; **Thermal EMF,** less than 1 microvolt; **Current Carrying Capacity,** 5 amp.; **Dielectric Strength,** 1000 volts, rms, 60 cy. — terminals to ground and terminals to terminals; **Insulation Resistance,** greater than 500,000 megohms; **Life Cycling** (make and break), 100,000 cycles at 1 amp., 120 VAC, res. and ind., and 28 VDC res. and ind.

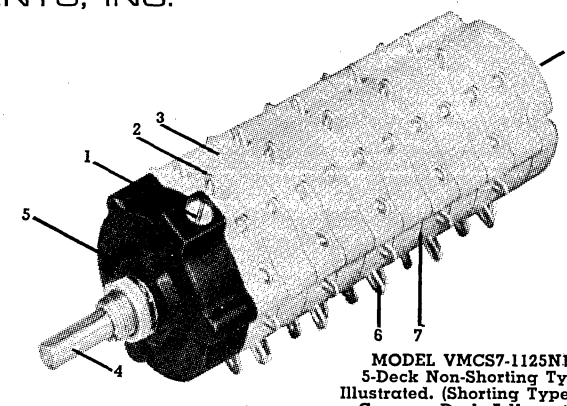
DIMENSIONS: diameter over terminals $1\frac{13}{16}$"; bushing $\frac{3}{8}$-32 x $\frac{3}{8}$" long; non-turn device $\frac{1}{8}$" diam., $\frac{17}{32}$" from shaft centerline.

NOTES:

* Model Number shown is for VMCS7, with coin silver contacts and rotor blades. For nickel silver, model number would be VMNS7; for silver plated brass, VMSB7.

** Unlike other J-B-T rotary switches, VM series is normally shorting type; for non-shorting construction add 50c per deck per switch, Net.

† Includes knob and mounting hardware. Quantity prices on request.



MODEL VMCS7-1125NF2
5-Deck Non-Shorting Type Illustrated. (Shorting Type Has Common Deck Adjacent to Front of Switch)

FEATURES:

(1) Adjustable detent action for variable torque (or factory set for 4 inch lbs. max.) (2) Unusually sturdy molded-in terminals .032" thick; accommodate two #18 wires. (3) Distinctive color-coded glass alkyd decks — **gray** for coin silver alloy contacts and rotor blades; **blue** for nickel silver; and **green** for silverplated brass. (4) Husky $\frac{1}{4}$" stainless steel shaft. (5) Permanent identification of positions 0 through 11, cast-in detent housing and molded-in rear deck. (6) Integral connections between contacts and terminals — no mechanical joints. (7) Enclosed decks may be stacked for explosion-proof switch, per methods 3 and 4 of MIL-E-5272.

Applications: selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding.

For further data, ask for Bulletins 162-R and D664A. Inquiries are invited on newly-developed miniature combination relay-oscillator types.

J-B-T frequency-sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwidth at which the relay responds will be proportional to the input signal level.
RR-A11- and RR-A10 types are round, 4-pin plug-in relays, used primarily on existing mobile equipment.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sealed construction. These units control the frequency of oscillation in vacuum tube or transistor oscillator circuits. The RO-B type oscillator control is recommended where accurate and stable AC signals are required.

RR-D types are internally shock-mounted resonant reed relays, which are square, sealed units with 7-pin miniature plug. They now are the most widely used J-B-T relays.

RO-D types are single-reed, internally shock mounted oscillator controls for applications where space saving is of importance. Dimensionally they are identical to RR-D relays.

HIGH VOLTAGE FUSES

Designed for use in aircraft radio equipment, transmitting equipment, X-ray apparatus, high voltage rectifiers, etc., for circuits up to 20 kW DC or 30 kVA AC Fuses are fiber enclosed with cadmium plated end caps. Two principles of arc suppression are employed: (1) Multi-break fuse wire which blows at each half inch of its length; (2) Ceramic baffles break the arc into several parts and quench it. **Blow Time:** 110%, 4-hour min.; 135%, 0–1 hour; 200% 0–2 minutes.

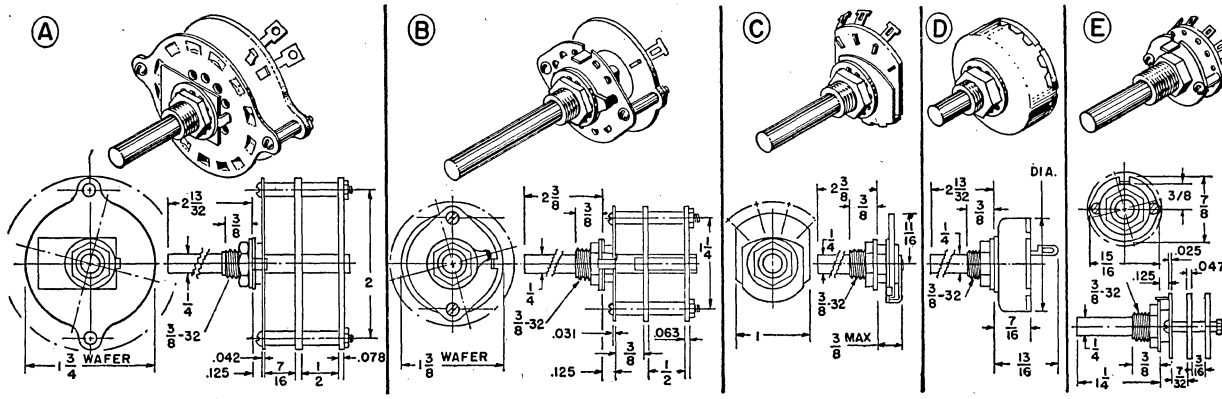
MALLORY Switches



Mallory switches are available in three general styles: Rotary, lever-action and pushbutton. Most styles are supplied in both shorting and non-shorting contacts. Shorting switches have contacts with "make" before "breaking" and are widely used in audio circuits. Contacts in non-shorting switches "break" before "making". These switches may be chosen with phenolic, ceramic or glass-epoxy wafer materials. Ceramic is usually selected for high voltage circuits as in switching RF equipment. All switches are supplied with normal mounting hardware. Dial plates are not included (except for Type 13124L).

PHENOLIC WAFER ROTARY SWITCHES

Mallory phenolic wafer rotary switches come in several sizes and contact arrangements. Supplied with nut, washer and 366-1 black knob. Phenolic is MIL grade Richardson T725.

STANDARD 1¾" DIAMETER (FIG. A)

Rated 1 amp at 300 VDC; 4 amps, 50 VDC; 2 amps, 300 VAC rms; 12 amps, 6 VAC rms. Maximum non-breaking resistive load, 12 amps. Breakdown, 1000 VAC/DC. Contact resistance less than 0.01 ohm. Supplied with adjustment pin and stop plate.

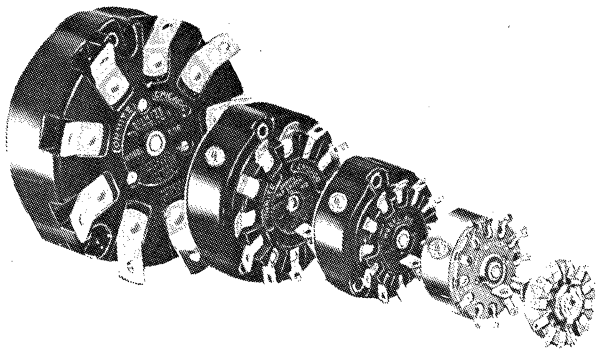
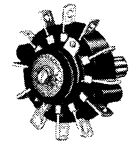
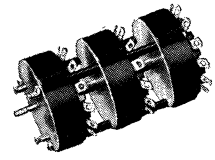
OHMITE power tap switches, high current, non-shorting type

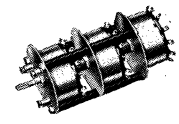


Introducing

MODEL 711
Smallest Switch for Its Rating







Ohmite single pole, rotary, multi-position switches have proven their durability over many years in demanding applications. Such applications are found in switchboards, arc welders, spot welders, battery chargers, motor controls, tapped transformers, X-ray equipment, diathermy equipment, radio transmitters, electrical machine tools and many other products. Six sizes, including the new, miniature Model 711, provide a choice of ratings from 7 amperes at 125 volts to 100 amperes at 300 volts AC. A choice of the number of taps is provided up to the maximums indicated. All switches are enclosed except for the Models 711 and 111. All switches feature the slow-break, quick-make action deemed so desirable for switching of AC current.

The five sizes offering ratings from 15 amperes to 100 amperes (Models 111, 212, 312, 412 and 608) feature all ceramic, arc-proof bodies and solid silver alloy, fixed and movable contacts. The large, thick, silver-alloy fixed contact disks are permanently welded to copper studs. These, in turn, are riveted and soldered to sturdy terminal lugs, assuring a permanent mechanical and electrical joint. The rotor (moving) contact, also of solid silver-alloy, is riveted and soldered to the contact arm. Face of the rotor contact is slightly rounded assuring a perfect seating of the contacts with a slight rubbing, self-cleaning motion on every operation.

The new Model 711 tap switch was designed to achieve high current capability with small size. It is actually smaller than many low current instrument switches. It interrupts 7 amperes at 125 VAC and can carry 15 amperes AC or DC. The Model 711 features a melamine phenolic body with solid silver alloy fixed and movable contacts. Dual-purpose terminals allow connection by soldering or by means of 3/16" quick-connectors. This switch is stocked as a single, unenclosed unit, but is available made-to-order in enclosed tandem assemblies up to 10 units or as a single enclosed unit.

The following Ohmite Tap Switches are listed by the Underwriters' Laboratories, Inc., Reexamination Service for use where the acceptability of combination (with other apparatus) has been determined by them: Models 111, 212, 312 and 412. Variations from the basic switch design, identified by suffixes A, B, C, or X are also Underwriters' approved. When the switches are not factory installed, screw terminals are specified by the Underwriters' Laboratories for Model 312 and soldering lugs for Model 412. Further information on terminal fittings is available on request. When an Underwriters' approved unit is required, specify this on the order.

ALL CERAMIC OPEN TYPE TAP SWITCHES

Designed to transfer currents of several amperes in circuits requiring high voltage insulation. Ceramic body construction is the same as employed in Models J and K rheostats (see page 19). Monel metal taps; silver-graphite brush.

SHORTING TYPE SWITCH: Moving contact bridges closely spaced taps completing a new circuit before breaking the previous one. Switch arm is not indexed and can be left in any position.

NON-SHORTING SWITCH: Positively indexed, moving contact completely disconnects from one tap before contacting succeeding tap.

Switches up to 8 taps are approximately 3 1/4" diameter including lugs; 9 to 12 tap switches are approximately 4 1/4" diameter. Switches can be ordered assembled 2 or 3 in tandem. Single hole mounting by means of 3/8" diameter bushing and hexagon nut accommodates panels up to 1/4" thick (maximum). The "non-turn" lug requires a 3/16" panel hole 1/2" below the center of the shaft. Shaft diameter is 1/4". Recommended knob, Stock No. 5150, see page 20.

Maximum current capacity is 7 amperes but only 3 amperes at 120 V.A.C. should be interrupted. Current ratings are less for all direct current circuits above 20 volts, for inductive circuits and high voltages.

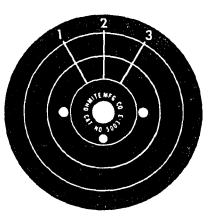
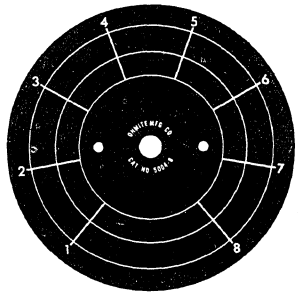
TAP SWITCH DIALS





Dials for Ohmite tap switches are made of aluminum, etched and enameled black. Dial markings are bright aluminum. The number of dial calibrations or position markings agree with the actual number of positions on the switch. Note, in the table, that dials for switches Models 212 and 312 are available in two diameters to suit the recommended knob.

More, both ends are insulated from one another. The practical fork-ends are a "must" for twisting or holding wires. And when you want to scrape joints, connections or ream out lug holes, just flip your **Beau-Tech** soldering aid to the spade end. Non-slipping, non-rolling "hex" handles. Available in standard, miniature and single ended models.

MODEL 30 CONTROL TRANSFORMER

FOR ALL 6 VOLT SOLDERING IRONS

The **R30,** transformer model has a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, a solder iron may rest on a special nozzle provided on the transformer. This protects against overheating. The **R30,** permits universal use of all the various 6 volt irons with their different capacities, up to 30 watts.

MODEL R30, rated 30 VA, 5.1#. Price....**$28.00**

PLASTIC HANDLES— (TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x ⅜" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. ⅛" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH — has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

STAINLESS STEEL WIRE BRUSHES
on steel shaft approximately 2" long overall. Can be used in a regular pin vise. **.35 net**

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used.
*"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

ERSIN Multicore

5-core solder

Available in 1-lb. and 7-lb. reels

TECHNICAL ADVANTAGES:

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water-white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

Conforms with all pertinent federal specifications.

Multicore construction: Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single corded solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

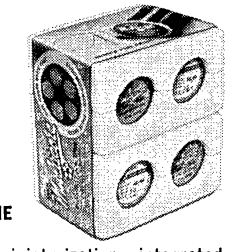
NOTE: Multicore presents an entirely new concept in solder packaging designed to bring the solder to you in perfect condition at all times. The attractive polystyrene foam container resists damage in shipping and each individual reel is **skin packed** to keep the solder clean and fresh and to minimize oxidation no matter how long it may be stored.

STANDARD TIN/LEAD ALLOYS AND GAUGES

Available from stock: 63/37; 60/40, 50/50, 40/60; Savbit; Special Alloys — H.M.P. (High melting point, 565°F); L.M.P. (low melting point, 354°F). Other alloys upon request.

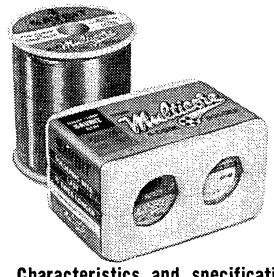
Gauges: 14 s.w.g. (.080") through 24 s.w.g. (.009").

NOTE: Soldering iron tips should always be 108°F above melting point of alloy.



NEEDLE FINE GAUGES

For microminiaturization, integrated circuits and other similar requirements. Off-the-shelf delivery in alloys 63/37 and 60/40, in even gauges from 22 s.w.g. (.022") through 34 s.w.g. (.009").



COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips . . . increases tip life by 1,000%.

Characteristics and specifications: Savbit Alloy is available in Ersin Multicore 5-core solder containing non-corrosive extra-fast Ersin Flux in 14, 16, 18, 20, 22 and 24 gauge. Melting point: Virtually the same as standard tin/lead alloys. Excellent conductivity, tensile and shear strength.

Available in new 1-lb. and 7-lb. reels, skin wrapped and foam packaged.

NEW ERSIN LIQUID FLUXES

Meet the same high quality standards as Ersin Multicore Solder. Three new Fluxes: Formula No. 5380 and Formula No. 0360 meet Government MIL specifications for active and non-activated liquid fluxes, respectively. Formula No. 4370 is an activated liquid flux which is the external counterpart of the flux contained in Ersin Multicore 5-Core Solder. Conforms to the latest Federal Specification QQ-S-571d.

NEW MULTICORE HIGH PURITY EXTRUDED SOLID BAR SOLDER

Offers higher purity achieved through greater quality control, only possible with extrusions. Available in skin packaging as well as bulk. Available in two alloys: 60/40 and 63/37.

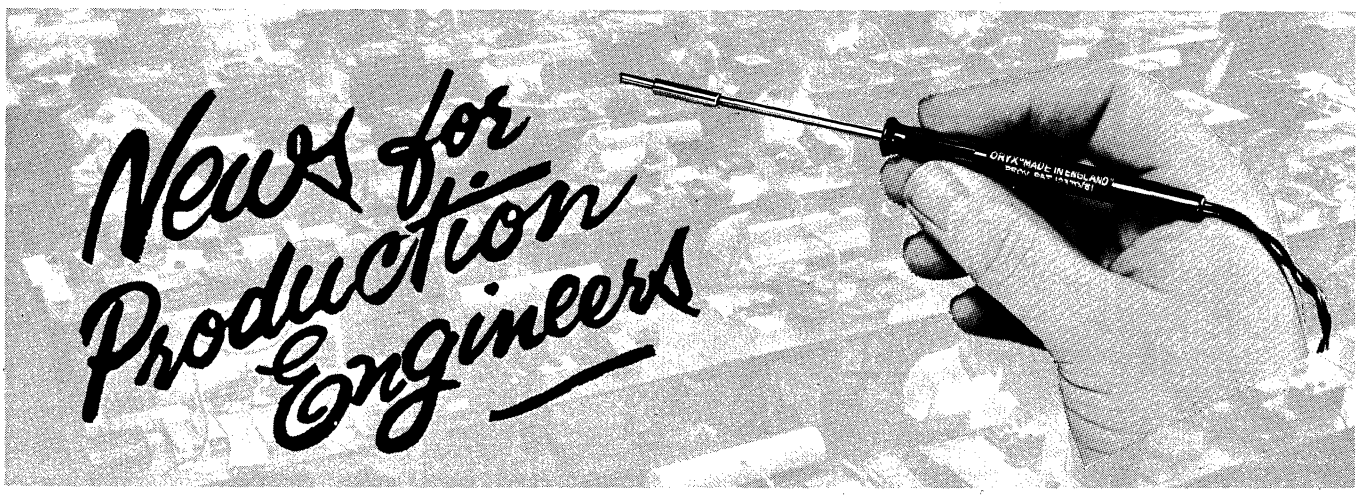
ORYX PRECISION SOLDERING INSTRUMENTS



Oryx industrial soldering instruments offer these important advantages:

MINIATURE SIZE

FEATHER WEIGHT

HIGH EFFICIENCY

SAFETY

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat **within** the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joints is so very short. The need for large insulating handles is eliminated.

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

REPLACEMENT TIPS for low-voltage soldering irons

Oryx tips are precision machined from a special copper alloy with outstanding heat conduction characteristics. Nickel plating reduces scaling. Iron-plated tips and solid nickel tips give much longer life with slightly reduced heat transfer. Gold tips recommended for microcircuits only.

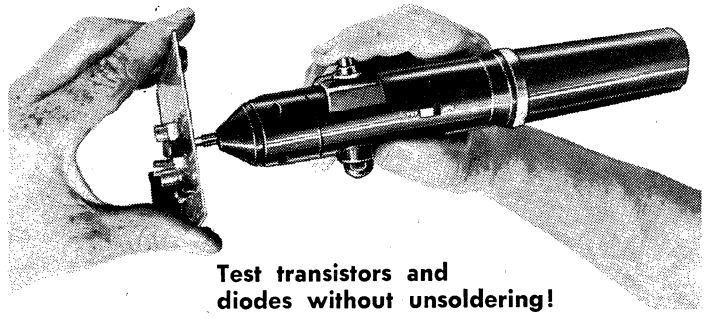
"IN-CIRCUIT" TRANSISTOR TESTER



Test transistors and diodes without unsoldering!

A new test instrument for the circuit designer or test technician. Makes rapid "go - no go" evaluations of semiconductors while they are still in the circuit. Checks cut-off and condution on PNP and NPN transistors and diodes without the need for costly unsoldering. To use, the operator sets the selector switch to NPN or PNP. He then presses the tester's sharp spring-loaded pins (arranged in TO-5 configuration) against the transistor's printed circuit connections. Open and shorted transistors are readily identified by noting the condition of the tester's pilot light. Diodes and unmounted transistors are similarly tested using a set of extending leads and clips. An optional 7-position diode adapter may be used to test dodes in the circuit. Furnished complete with extending leads and alkaline battery, ready to operate.

Three step illustration at left shows unique "bubble action" sequence which assures positive, goof-proof fastening every time.

Weller® DUAL HEAT Soldering Guns

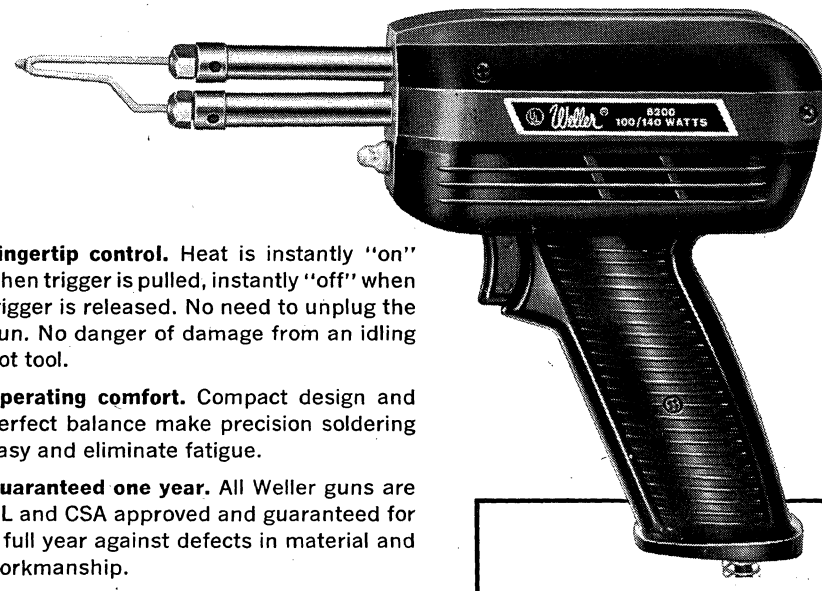
Dual heat. All Weller guns offer Dual Heat —an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

Instant heat. Solders in seconds. No waiting for the tip to heat. No wasted current.

High-efficiency tip. Made of copper for superior heat transfer and optimum soldering results. Slips easily into difficult places.

Exclusive tip grip. Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

Spotlight. Illuminates the work and eliminates shadows.



Fingertip control. Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

Operating comfort. Compact design and perfect balance make precision soldering easy and eliminate fatigue.

Guaranteed one year. All Weller guns are UL and CSA approved and guaranteed for a full year against defects in material and workmanship.

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards.

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
SM Temperature stabilized cores, ±.25% —65°C to +125°C.
SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED TRANSFORMER CO., INC.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an even greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long-life components, ease of signal mixing and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of —55°C to +75°C.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

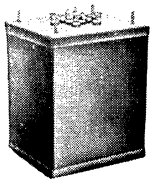
TRANSISTOR CONVERTERS



THE FREED LINE OF DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters. DC to DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

- **RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.**
- **HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.**

DC TO DC CONVERTERS

All TDC units are Hermetically Sealed, Oil Filled. Mtg. base plate must be mounted on a sink of sufficient area to maintain a base temperature of 70°C. Maximum output regulation 5% from half load to full load. Ripple frequency 4 to 5 KC; Ripple content 0.1%.

TELEMETERING COMPONENTS

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetering applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature **exceptional phase linearity,** excellent selectivity characteristics and plug-in construction. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

TELEMETERING BAND PASS FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327

These filters cover the frequencies from 400 c.p.s. to 70KC. Narrow frequency B.P.F. have a band width of ±9¾% of center frequency and 45 DB (minimum) points at ±7½% of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of ±19½% of center frequency and 50 D.B. points at ±15% of center frequencies of higher or lower second adjacent channels.

FREED FILTERS

To MIL-T-27A and MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance—10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 9:1. (Output voltage to source voltage.)

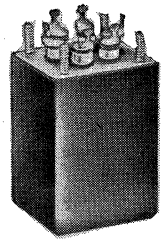
SERIES 1950 NULL "T" FILTERS



The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

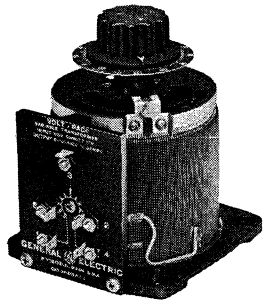
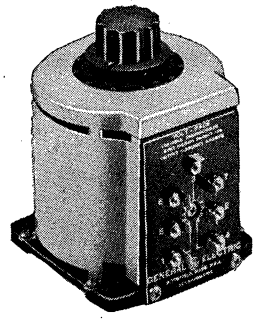
volt-pac® VARIABLE TRANSFORMERS

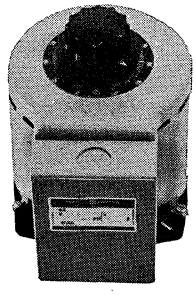
NEW IDEAS IN ELECTRONICS



Manual uncased unit—exposed terminals



Manual cased unit—exposed terminals



Manual cased unit—enclosed terminals

The Volt-Pac variable transformer is a control device which provides continuously adjustable output voltage from a fixed line input to vary the voltage applied to a particular electrical load. With Volt-Pac units, output voltage is changed by flux transformation . . . in the unsaturated range of the magnetic core. The results . . . low cost, versatility, reliability, simplicity, and no wave form distortion.

Volt-Pac units, for surface or back-of-panel mounting, are designed for operation in ambients of —20C to +40C at full rated load, and under all load conditions have low electrical losses.

* When Overvoltage Connection is used, rated current should not be exceeded. Output kva for Overvoltage Connection is maximum output voltage times rated current.

† When using extended tap connections, operation is for 60 cycles per second only.

‡ Output at Overvoltage Connection is 0-132 volts.

§ When operated on lower input-voltage tap, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

¶ For Line-voltage Connection only — No Overvoltage Connection provided.

■ For 240-volt input, 0-240-volt output, application only.

• For 480-volt input, 0-480-volt output, application only.

ϕ 60 cycles only.

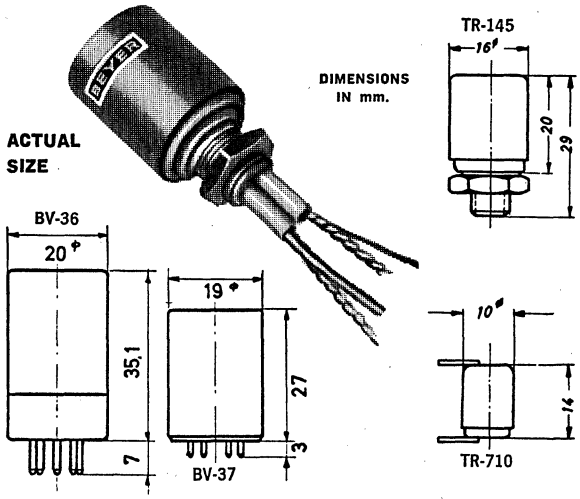
GOTHAM

BEYER TRANSFORMERS
MINIATURE AUDIO



The BEYER line of miniature audio transformers distributed by GOTHAM represents over 30 years of experience in the field on the part of one of Europe's largest quality microphone manufacturers. It is for this reason that we make only one type of transformer in two sizes: A low level audio transformer suitable for microphones, tape playback heads, etc.

A special winding process permits these transformers to be made in this miniature size while maintaining studio quality frequency response, distortion, and level capability. The coil is wound on a continuous laminated core which means the elimination of the split core with its inherent losses. Result is a semi-toroidal construction with its superior resistance to hum induction.

BEYER transformers are used in professional audio equipment by such outstanding manufacturers as Ampex, Bauer, Collins, Precision Instrument, Rust, and many others. All transformers are made to special order to O.E.M. users' specifications. Samples can be supplied within 2 weeks, production usually within 4 weeks.

FOUR PHYSICAL MOUNTINGS ARE AVAILABLE:

Threaded Stud: The Model TR-45 Commercial Quality and TR-145 Studio Quality units are offered in mu-metal housing with threaded stud supplied with two nuts.

Solder Lug: The Model TR-45L and TR-145L are same as above but have radial lugs each end of housing to permit terminal board or Vector socket mounting. Also available in sub-miniature TR-710 Model (see fig.). Primary and secondary windings brought out opposite ends of mu-metal can.

Plug-in: The Model BV-36 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing with 7-pin miniature plug base. Same mu-metal shielding.

Printed Circuit: The Model BV-37 is encapsulation of TR-45 and TR-145 Models shown above in molded plastic housing only 1.09″ high with special 7-pin, 8-pin, or 9-pin printed circuit base.

ELECTRICAL CHARACTERISTICS:

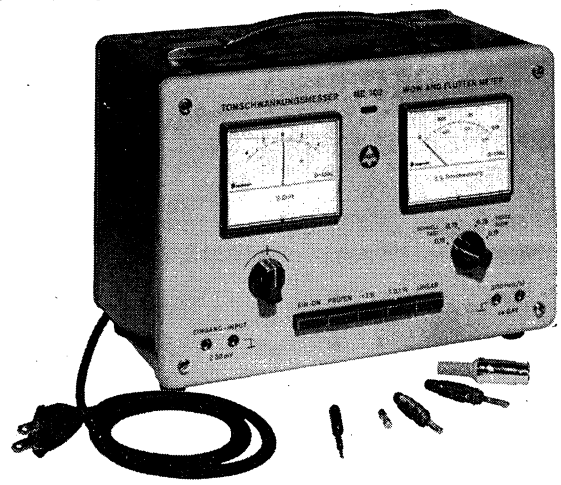
WOW & FLUTTER METERS
ME 101/102



The ME-101/102 instruments are intended for the measurement of the wow and flutter content of all types of recording and reproducing devices. They are fully transistorized, simple and convenient to use. The units are particularly suited for production testing and service work in addition to laboratory testing.

An internal signal generator provides the standard frequency of 3150 Hz. For the purpose of static and dynamic recalibration of the measuring unit, the generator can be detuned in a definite manner or can be frequency modulated from the power line.

Tone fluctuations from ±0.02 to ±2.5% for the ME-101 and ±0.01 to ±0.75% for the ME-102 can be read linearly or weighted as quasi-peak values (according to CCIR and DIN). Hence the properties of high quality tape and record playing equipment, as well as those of dictating machines and home equipment come within the ranges of the instruments. The fluctuation meter ballistics conform to the CCIR standard. A second instrument, the "drift" indicator, measures the frequency deviation of the recorded tone from 3150 Hz. Both indicating instruments can be switched to "rapid" or "slow" indication, as desired.

Besides the normal measuring connections on the front of the instruments, the back is provided with a connector for testing home tape recorders and record players. Other connectors are provided for the connection of external filters, oscilloscopes and graphic recorders.

DC TO DC CONVERTER TRANSFORMERS—BLOCKING OSCILLATOR TYPE

Laminated series blocking oscillator type. Approximate repetition rate, 400 Hz. All are **Fig. L** except M8051, **Fig. Q.** DC output voltage for all but M8073 is given for transformer used in blocking oscillator circuit with single capacitor-input rectifier. DC input current, output current and output voltage of Model M8073 depend on load and bias; frequency varies from 100 to 2800 Hz. Fig. L types are open frame units meeting MIL designation TF6RX09ZZ; Fig. Q type is enclosed unit meeting MIL designation TF4RX09YY.

OHMITE variable transformers

Unique for the design innovations they incorporate, Ohmite "OHMITRAN" v.t.® variable transformers include exclusive field-proven features. They offer long, low maintenance operation with excellent regulation at any voltage setting within the rated load plus an output free of waveform distortion. Six frame sizes offer a wide range of electrical ratings to meet most industrial applications. These include three new, compact, low-power models (VT1, VT02, VT3,) which permit a fine choice of six ratings from 1 to 3 amperes.

The VT1, rated 1 ampere, is the smallest commercial variable transformer available.

UL LISTING: Most single and tandem VT4, VT8 and VT20 transformers used for 120 volt line operation are Underwriters' Laboratories listed. Consult factory for specific approvals.

POSITIVE CURRENT TRANSFER . . . achieved with specially designed brushes connected through high conductivity contact arms or pigtails to a large slip ring which contacts a wide area of the collector ring. The brush contact assembly on the VT1, VT02, and VT3 is instantly replaceable, when necessary, as a result of a slide-on, snap-in design. Brushes of the other models are easily replaced also.

ADJUSTABLE SHAFT: On all Ohmite transformers, except the VT2LN, the shaft may be extended out from either the brush or opposite side as desired. On the VT1, VT02 and VT3, both single and tandem assemblies, this is an **exclusive** Ohmite feature which affords greater versatility of mounting and application. For example, substitution of a longer shaft or extension of the standard shaft allows actuation of other devices, such as switches or potentiometers without special construction. The shaft is freed simply by loosening set screw in the hub assembly. A double flat on the shaft permits two knob positions.

On the VT4, VT8, and VT20 types, the adjustable shaft feature permits **table or panel use.** "Ganged" or tandem VT4, VT8 and VT20 units employ a thru-shaft offering the same flexibility. On VT4 and VT8 units, shafts are fixed in the desired position by means of socket head screws located in the hub of each "brush-radiator" plate. The VT20 employs a unique collet-type shaft lock.

INTERCHANGEABLE WITH OTHER POPULAR TYPES: Basic "v.t." units have mounting provisions which match those of virtually all popular transformers of comparable current rating. Models VT4, VT8 and VT20 mount by means of bolts. Normally 3-hole mounting, single VT4 units can be "4-hole mounted" by means of adapter plate, see page 34. Individual Model VT1, VT02, VT2LN, or VT3 units mount by means of a standard ⅜-32 threaded bushing. All tandem assemblies mount by means of bolts or nuts. Knob, dial and mounting hardware are included with each transformer.

DIRECT READING, TWO SCALE DIAL . . . calibrated on one side for overvoltage connection; on the reverse side for line voltage connection. Dials normally included with transformer read clockwise for increasing voltage; counter-clockwise calibration available—see page 27.

WIRING AND CONNECTIONS: Wiring instructions to arrange various modes of operation are enclosed with all OHMITE variable transformers. Terminal panels or adjacent nameplate carry convenient wiring diagram, coded terminals and input and output data. Three way terminals on VT1, VT2LN, VT02, VT3 will accept ¼" push-on connectors, screws and nuts, or conventional soldering.

ROTATION OPTION: On VT4, VT8 and VT20 transformers connected for overvoltage, either clockwise or counter-clockwise increase of voltage can be arranged easily by the user. Increasing voltage in either direction can be arranged on all units connected for no-overvoltage output. Dials for counter-clockwise operation are stocked. See "Accessories."

OVERVOLTAGE OPTION: On all transformers with overvoltage feature, no-overvoltage operation can be arranged on the terminal panel.

NO-OVERVOLTAGE TRANSFORMERS ("N" suffix): Provide considerably more current due to heavier gage winding.

240-VOLT INPUT ("H" suffix): On units which are wound for 240-volt input, a 120 volt input tap is also provided. With the use of this input, the maximum current rating applies up to 120 volts output but beyond this reduces proportionately to approximately 50% at maximum voltage output.

LOW VOLTAGE INPUT ("L" feature): Designed for a maximum input of approximately 40 volts, with high current output.

GROUNDED INPUT & OUTPUT ("C" feature): Units in type F or G cases can be provided with a three-conductor cord and outlet. One conductor is grounded to the case. This feature standard on all cased VT20 units and on all metered units.

ENCLOSED OR CASED UNITS: In grey wrinkle finish. "Basic protective enclosures" (Type B) expose the transformer's terminal panel and mounting base and are supplied presently on VT20 models only. (See tandems in "B" enclosures below.) "Fixed mounting enclosures" (Type E) are intended for permanent mounting on table, panel or inconduit-line. Standard portable units (Type F) carry a line cord, outlet socket, and fuse except for VT20F which has a circuit breaker. Deluxe portable units (Type G) utilize a circuit breaker, can be switched to overvoltage or no-overvoltage as desired, have a handle which also serves as an easel.

METERED ENCLOSURES: VT8NFC, VT8GC, VT20NFC and VT20GC transformers are available with voltmeter (V), voltmeter and ammeter (A) or voltmeter and wattmeter (W). The metered transformer enclosures are larger than the non-metered types of comparable designation, (see dimensions below). All stock metered units have the three-conductor grounded cord and outlet and all, except the VT8NF group, are equipped with carrying handles.

Footnotes for Stock Table

[1] Frequency shown is a minimum — units may be used up to 1000 cps.

[2] VT8H and VT20H and 240V output for VT8HN and VT20HN. With use of 120V input VT8H, VT8HN, VT20H, VT20HN also have taps for 120V input with 280V output for the max. current rating applies up to 120V output but reduces to approx. 50% at max. output voltage. In the case of tandem units, use of the low voltage inputs would correspondingly derate the current at the higher output voltages.

[3] Connected at factory for overvoltage output — easily reconnected by user for no-overvoltage output. On VT8G and VT20G, switch selects overvoltage or no-overvoltage.

[4] User wires for desired output. Dial normally calibrated for overvoltage.

[5] 2-in-tandem normally wired for series connection; 3-in-tandem for Y connection.

[6] When transformers are series connected, load cannot be grounded.

[7] Includes knob, dial and mounting hardware.

[8] May be used at 50 cps if connected for no-overvoltage output.

[9] Overvoltage connection must not be used.

[10] 240/280 volt cw dial standard except on VT1, VT02 and VT3 tandems where 240/264 volt dial is standard or on VT8H-2, VT8HN-2, VT8H-3, VT20H-2, VT20HN-2, VT20H-3 and VT20HN-3 where 480/560 volt dial is standard. Request other dials if desired — see "Dials" above.

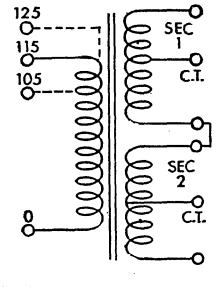
PARALLEL CONNECTED SECONDARIES

SERIES CONNECTED SECONDARIES



All transformers are designed conservatively for a max of 45°C rise above ambient, for use on 115V power line from 50-500 cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers and chokes are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings.

HIGH & LOW CURRENT CHOKES 0.1 to 1000 AMPS

OPEN FRAME • EPOXY ENCAPSULATED (GRADE 5) • HERMETICALLY SEALED (GRADE 4)

Signal's line of High Current Chokes is the most extensive available. It is designed to complement the selection of High Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values.

Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

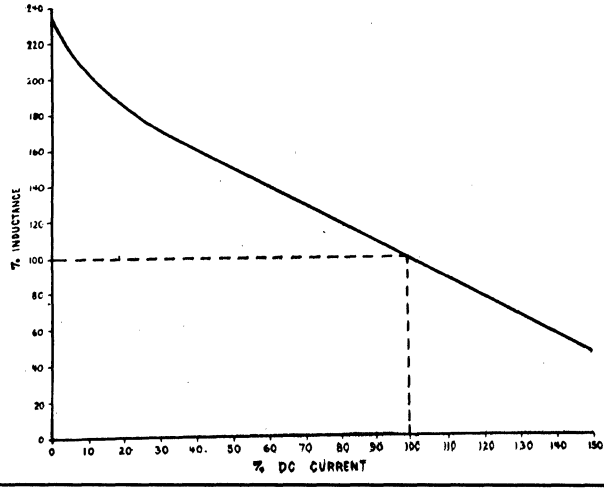
INDUCTANCE VARIATION WITH DC CURRENT



The curve shown applies to the whole line of chokes. It allows the user to determine the value of inductance which will be obtained at intermediate and overload values of DC current. The values on the curve are stated in generalized coordinates of % inductance versus % DC current.

For example, the CH-100 at 50 amperes (50% DC Current) will have an inductance of 0.75 MHY (150% of rating), the CH-25 at 31 amperes (125% DC current) will have an inductance of 3.5 MHY (70% of rating).

It is not recommended that chokes be used at over 100% of rated current since temperature rise will then be excessive. However, if load current is intermittent, and RMS current is less than maximum rated current, it is permissible.

Special "swinging chokes" can be supplied where the slope of this characteristic is emphasized. Specify minimum inductance required at two current values (usually maximum and minimum current) and we will furnish prompt quotations.

MV (multi-voltage) secondaries may be series connected for any output from 1 to 54 volts, in 1 volt steps, at rated current. This is accomplished by using the small buck-boost secondary.

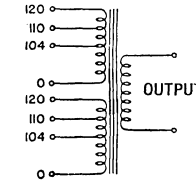
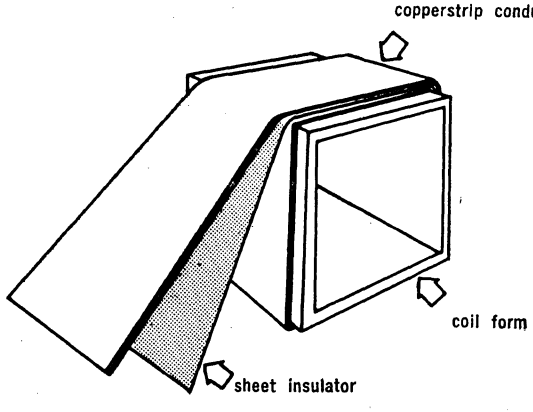
As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.



WINDINGS OF HEAVY COPPER STRIP



STRIP-WOUND SECONDARIES

At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).

Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer.

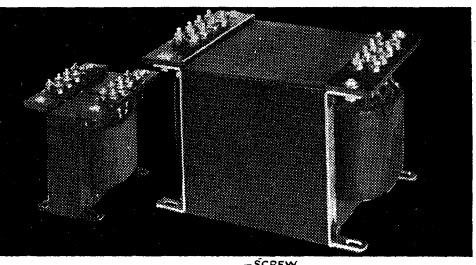
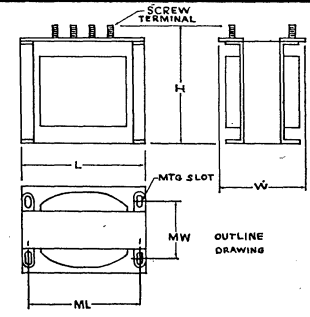
HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS



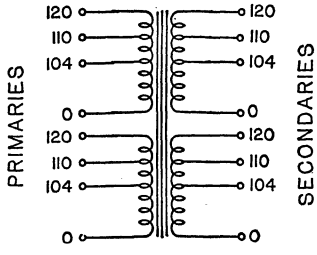
AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "UP" lines are designed for a maximum of 55°C rise above ambient, for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings.



"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec.



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is **doubled.**

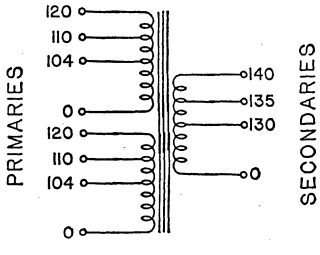
"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec.



The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts.

This type is quite useful to boost low line voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

SIGNALS CUSTOM SERVICE

Many of our customers do not realize that the major portion of our shipments consists of "special" or "custom" items.

Usually, the final application of one of our stock transformers does not require the full number of taps or windings provided. These naturally are part of the cost of the item. If we are advised as to the specific taps used or as to what intermediate voltage or current is required we can begin production quickly on this variation of our stock item. If we define production quantities as roughly over 50 pieces, the customer will do better price-wise on his custom made item than on the standard.

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher conversion efficiency and lighter power line drain of 3 phase systems. Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

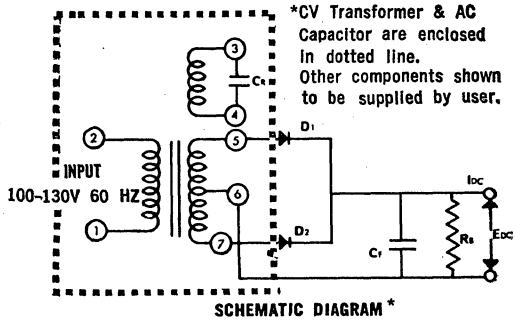
CONSTANT VOLTAGE TRANSFORMERS

FOR USE IN DC POWER SUPPLIES (TYPE CDC)



SCHEMATIC DIAGRAM *

CDC CONSTANT VOLTAGE TRANSFORMERS

Signal's CDC Regulating Transformers are specifically manufactured for use in DC Power Supplies. They are designed and rated for use with a full wave center-tapped silicon rectifier. CDC transformers are operated in ferro-resonance and are used in conjunction with an AC **tuning capacitor** (Cr in schematic diagram), which is supplied with the transformer.

In order to construct a regulated power supply the only other parts necessary are two diodes (D_1 and D_2), an electrolytic computer grade capacitor (C_f) and a bleeder resistor (R_b). These are standard shelf items.

The specification chart lists specific outputs available and the recommended auxiliary components. Part numbers are coded in terms of DC outputs, e.g., CDC-15-2 will give an output of 15V DC at 2 amps DC.

Electrical performance is completely specified. The DC voltage is constant to ±1% over the line voltage range of 100 to 130V at 60 HZ. The nominal output is held to ±2%. Closer tolerance on nominal output (±1%) can be obtained on special order at slightly higher cost.

Load regulation is specified as the rise in dc voltage output (increase in E_{dc}) from full load to the no load, ¼ load, and ½ load points. The filter capacitor (C_f) specified should be used and will yield the values of ripple voltage shown.

A significant protection feature is the fact that the DC short circuit current is limited to a maximum of 2 times rated current (3 times in size "C-6" units). This protects the entire circuit against shorts.

Signal ACV transformers are manufactured for use with AC loads. They are simple and rugged designs and will regulate to within plus or minus 1% for input variations from 95-130V at 60 cps. If regulation of plus or minus ½% or better is desired, special units can be made to your order. ACV transformers will regulate with loads that are not unity power vactor.

Full regulation is maintained at any load from about 20% to 100%. Overload current is limited to a maximum of 200% of rated current at short circuit. The 6.4 and 12.8V ratings are ideal for use with tube or lamp loads since the short circuit current rating limits the inrush current to cold filaments. Stabilization of the voltage results in longer filament life.

ACV transformers are "normal" harmonic type with approximately a square wave output.

ADVANTAGES OF CONSTANT VOLTAGE TRANSFORMERS

REGULATION — output regulated to plus or minus 1% for line voltage variations of 95 to 130V at 60 cps.

SELF-PROTECTION — against output short circuit. Current limited to a maximum of 2 times rated current.

MECHANICALLY RUGGED — as resistant to mechanical shock as conventional power transformers.

NO MOVING PARTS — no adjustment or maintenance necessary.

SQUARE WAVE OUTPUT — ideal for use in rectifier circuits — little filtering needed.

HIGH DEGREE OF ISOLATION — between input and output circuits — both physical and electrical isolation, electro-static shields not necessary.

RESONATING CAPACITOR — supplied with transformers.

EPOXY IMPREGNATION — minimizes acoustic noise.

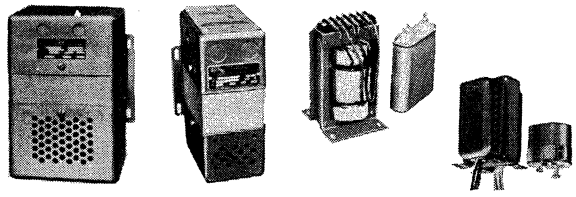
SOLA® constant voltage transformers



The SOLA® constant-voltage (CV) transformer is a static-magnetic voltage regulator which provides a stabilized output voltage even though the input voltage varies over a wide range.

Stabilized voltage is required for the efficient operation of many types of electrical and electronic equipment, and also prolongs the life of electronic components by eliminating over-and-under-voltages and protects against excessive inrush and fault currents.

Sola transformers are available in designs with harmonic neutralized (CVS) and normal harmonic (CVN) wave-shape outputs. The CVS is used where a distortion-free output is required to drive sensitive instruments and equipment. Electronic-power types are also available for filament (CVF) and plate-filament (CVE) service.

This catalog lists the wide range of stock ratings and types available off-the-shelf from your nearest Sola stocking distributor. For custom designs in OEM quantities, contact your nearest Sola sales offices or the factory.

SOLA® CVS-harmonic neutralized type

Sola CVS type transformers contain less than 3% total rms harmonic content in the output. Recommended for all AC applications where harmonics can affect operation, CVS types are the only constant voltage transformers with built-in harmonic neutralizing circuits. CVS transformers use no filters and therefore do not need extra capacitors and noisy chokes. CVS transformers are smaller and more rugged than transformers employing filters for wave-shape improvement. Regulation is ±1% for an input range of ±15% of nominal voltage.

SOLA® constant voltage transformers

SOLA® CVN-normal harmonic type

Sola CVN type transformers provide the same ±1% regulation as the sinusoidal series. CVN transformers contain an average of 20% rms harmonic content and are recommended for electrical loads not affected by harmonics, such as solenoids, relays, filaments and where rectification is required.

SOLATRON® line voltage regulators

The Solatron® LVR is the first regulator to combine in one unit the qualities of **fast response, "tight" voltage regulation, no moving parts, adjustable output, compactness, and high kva capacity.**

The Solatron® regulator holds voltage constant within ±1% for any combination of line, load, and frequency, in the face of line variations up to +10/−20%, load variation from 0-100%, and frequency variation of ±5% or greater.

The Solatron is a solid-state device with no moving parts, requiring no adjustment, maintenance, or attention. It combines the ruggedness typical of transformers with the light weight of electronic control circuitry, resulting in a regulator of remarkable compactness. It has great versatility in location, floor or wall mounting, and installation.

60 cycle (57-63 Hz) single-phase

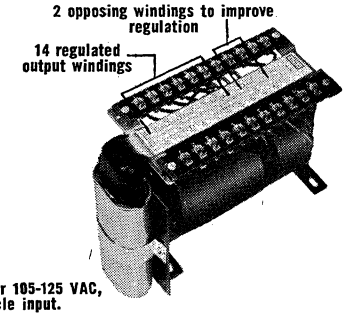
SOLA® Multi-tap[T.M.] CVR regulated power supply transformer

The SOLA Multi-tap[T.M.] CVR is a constant voltage transformer with taps to provide special voltages ready for rectification with stock silicon rectifiers to complete a regulated d.c. power supply. In effect, the Multi-tap CVR is a custom SOLA CV transformer with off-the-shelf availability, at low cost, for small quantity requirements. Six models provide over 100 regulated output voltages. The relatively square wave-shape makes the Multi-tap CVR especially suited to rectifier applications.

All CVR transformers are designed to operate in Full wave center tap or bridge type circuits with readily available stock silicon rectifiers. The regulating ability and typical characteristics of the CVR are similar to the familiar Sola constant voltage (CVN) transformer.



Designed for 105-125 VAC, 60-cycle input.

applications for the Multi-tap[T.M.] CVR

- **Design of a regulated d.c. power supply requiring custom output for short-run production.**
- **Building block systems requiring voltage adjustability for later additions of components.**
- **Systems requiring voltage adjustability to compensate for line drop to remote units.**
- **Immediate requirements when custom Sola CV is being designed and manufactured.**
- **Short-run production requiring low-cost, and "off-the-shelf" custom Sola CV.**
- **Prototypes requiring custom Sola CV transformers.**
- **Immediate requirements for experimentation.**

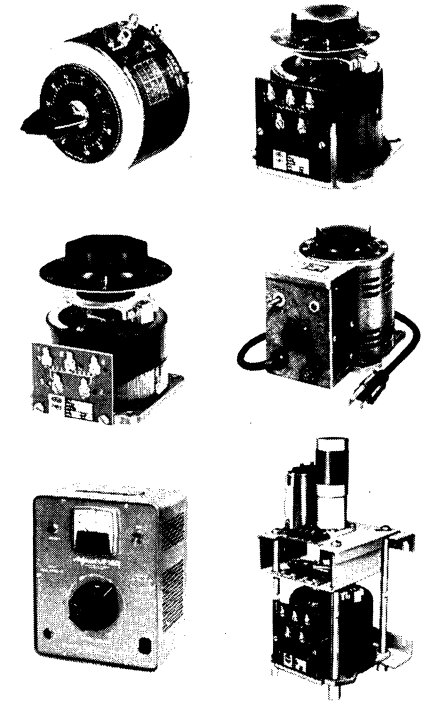
STACO® Variable Autotransformers



When you specify Staco Variable Autotransformers you get all these important advantages: Variable output voltages with high efficiency, reliability and minimum maintenance; epoxy coated coils (where possible) that increase commutator stability; optimum core and coil design results in higher current ratings and greater overload capabilities; delivery of output voltages of zero to line voltage or zero to 17% above line voltage; terminals permit connection for increasing voltage in either clockwise or counter-clockwise rotation of knob; regulation is independent of load . . . zero wave form distortion; moderate temperature rise; precious metal plating of commutator surface eliminates oxidation and deterioration; all units designed for 50/60 cycle operation except as noted.

STANCOR OUTPUT TRANSFORMER CHART

audio transformers

A simplified selection of the proper transformer for use as a replacement in radio receivers or in the construction of audio amplifiers. **To use this chart,** check the first column for the tube being used, then read across for the applicable operating characteristics and correct Stancor transformer. In most cases, two Stancor part numbers are indicated in order to give a choice of Mounting styles.

The following table lists various amplifier power outputs with the corresponding impedance tap on the output transformer which will supply these three basic line voltages:

POWER OUTPUT	IMPEDANCE FOR 140 VOLT LINE	IMPEDANCE FOR 70.7 VOLT LINE	IMPEDANCE FOR 25 VOLT LINE
WATTS	OHMS	OHMS	OHMS
5	4,000	1,000	125
10	2,000	500	62.5
15	3,333	333	41.7
20	1,000	250	31.2
25	800	200	25
30	666	166	21
40	500	125	15.6
50	400	100	12.5
60	333	83	10.5
80	250	62.5	7.8
100	200	50	6.3

For power ratings not shown in this table, use the following formula:

$$Z = \frac{E^2}{W}$$

Z=Ohms
E=Volts
W=Watts Output

Impedance Tap for:

$$140 \text{ volt line} = \frac{20{,}000}{W}$$

$$70.7 \text{ volt line} = \frac{5{,}000}{W}$$

$$25 \text{ volt line} = \frac{625}{W}$$

ULTRA MINIATURE

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power.

These transformers are designed primarily for transistor audio applications but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations.

Stancor's broad line of commercial grade power transformers offers a choice of standard mounting styles. Listings are in ascending order of plate-supply voltage for ease of selection.

All units are designed and built to meet the exacting requirements of EIA for electrical tolerances, dielectric strength, temperature rise and construction. All are insulated with class A materials; (105°C max. operating temperature).

Transformers designed for full-wave C.T. rectification with capacitor input filter may be used with choke input filter allowing an increase in D.C. current of 30%.

Transformers designed for full-wave C.T. rectification with choke input filter may be used with capacitor input filter requiring a decrease in D.C. current of 25%.

SILICON OR SELENIUM RECTIFIER TRANSFORMERS:

Primary — 117 Volts 50/60 Cycles.
Solder Lug Termination

These transformers have been designed to operate in full-wave center tap or bridge rectifier circuits. The D.C. voltages shown are approximate since they depend on the internal drop of the rectifiers used.

Primary taps and an additional buck or boost tapped winding provides a wide range of output voltages. For detailed terminal connections, output voltages, etc. write for bulletin 518-R. For matching high current chokes see page 22.

STERLING TRANSFORMER CORP.

POWERSTAT® Variable Transformers now

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

ADJUSTABLE SPEED DRIVES

All motor-driven units in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 Series are available with adjustable speed drives which permit the output voltage of the transformer to be controlled over the full range of zero to maximum output voltage at speeds ranging from 5 seconds to 200 seconds. All control circuitry is solid-state and adaptable for present speed systems. The Adjustable Speed Control Potentiometer BHP65455-G1 can be remotely located from the variable transformer.

TYPE TP150

When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the unit winding is shuted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. For 50/60 hertz duty.

TODD ELECTRIC high current transformers and chokes are most widely used for high power rectifier and high current A.C. applications. They are built to the highest standards of workmanship. All types are designed for a nominal temperature rise of 45°C at full load and will easily withstand unusual overloads. The regulation is extremely low, varying from 10% on the smallest unit to 1% on the largest.

Four constructional types are available for maximum flexibility for use in either the laboratory, test rigs, OEM equipment, or production.

TODD ELECTRIC HIGH CURRENT CHOKES are the perfect companion to our High Current Transformers when utilizing inductive filtering in designing a power supply.

INDUCTANCE VARIATION

The inductance realized from any stock High Current Choke will vary from the normal rated values as shown by the graph when subjected to a non-rated current. Due to greater heating loss, steady state current should not be exceeded by more than 30% except for intermittent operation.

CHOPPER INPUT TRANSFORMERS

Triad Chopper Input Transformers provide exceedingly close balance between the two halves of the primary winding . . . minimum noise in microvolt ranges of input signals is assured with Triad's special core treatment techniques. For demanding transistor and tube applications, Triad's special design capabilities have an outstanding record. For special applications, consult Triad.

Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 500 milli-henries. Many uses, especially in airborne telemetering applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is 7/16 inch diameter by 1/4 inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27A, Grade 5 Class S (MIL type TF5SX20ZZ).

NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked * will give less than 5% inductance drop but should not be exceeded under operating conditions.

Inductance tolerance of EX-P05A through EX-P50A is ±5%; EX-001A through EX-500A is ±2%.

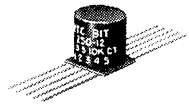
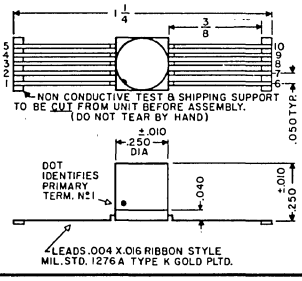
NEW ULTRAMINIATURE TRANSFORMERS & HIGH Q COILS

WEIGHT 1.1 GM.



PATENT APPLIED FOR

BIT-250* A COMPLETELY NEW DEVELOPMENT IN TRANSFORMER TECHNOLOGY



NOTES

- Frequency response: ±2 db, 300 Hz — 250,000 Hz @ 1 MW Ref. level
- Dielectric strength tested @ 200V RMS
- Designed and tested to full MIL-T-27( ) environmental requirements
- MIL Grade 4, metal-encased, ruggedized
- Lead Material: Gold-plated ribbon-style Kovar, solderable and weldable — MIL-STD 1276A Type K

PACKAGING

Size reduction without loss of performance is achieved by major reduction of air gaps in the magnetic circuit. Core permeability closely approaches the theoretical maximum for material and structure.

Materials, dimensions and surface finish are identical with IC Flat Pack standards. Removable support protects terminal alignment prior to final assembly. This insulated support allows testing in conventional jigs.

RELIABILITY

Cylindrical bobbin-winding techniques eliminate corner stress normally found in fine-wire windings of conventional rectangular structures.

Lead arrangements and terminations have been designed to maximum reliability under thermal shock and temperature cycling.

FLEXIBILITY

These units are designed to afford maximum flexibility of application.

Transformers are 7-terminal types, with center-tapped primaries and split secondaries. When connected in parallel, split-winding secondaries provide ¼ the impedance and twice the DC current capability as series connections.

Inductors in the stock line include both single-winding and split-winding types.

Leader may be bent for plug-in PC application.

MS* MINIATURE TOROIDAL HIGH Q INDUCTORS

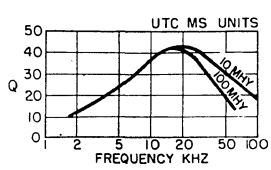
PHYSICAL CHARACTERISTICS

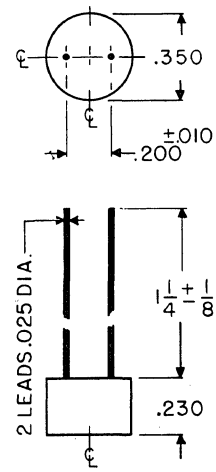
UTC's new MS series of high Q coils are only .23" high x .35" diameter. The low profile makes them ideal for high-density packaging requirements. All coils are molded in black epoxy.

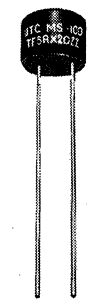
Base diameter (.35") and lead spacing (.2") fall within TO-5 envelope dimensions.

Leads are .025" diameter gold-plated dumet, type D per MIL-STD-1276A, and are both weldable and solderable.

TYPICAL Q CURVE







MS UNIT WEIGHT 1.3 GM

Q CHARACTERISTICS

Excellent Q in the 10 kHz to 50 kHz range, matching and often excelling the performance of much larger units. Designed for application over the wider range of 1 kHz to 100 kHz. See Q Response Curve.

MIL SPECS

All units have been designed, manufactured and successfully tested to complete MIL-T-27B environmental requirements. MIL Type TF5RX20ZZ.

TOLERANCE AND TEMPERATURE STABILITY

MS units have an inductance tolerance of ±2% at 0.1V RMS, 1 kHz, 0 DC, 25°C. All have excellent inductance stability with temperature: less than ±2% from −55°C to +105°C.

NEW "FE,* FI,* FO"* MINIATURE INDUCTORS

For other High Q Coils see pages 1 & 10.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 kHz. The FO units are adjusted at 1 V, 400 Hz. All units are adjusted to a tolerance of ±1%. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from −55°C to +100°C. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

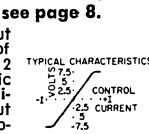
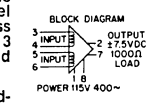
NEW LINE OF SOLID STATE "MAS"* PUSH-PULL MAGNETIC AMPLIFIERS

For other Magamps see page 8.





The "MAS" magamps operate on an input of 115 V 400 Hz with an output of ±7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a **power gain of approximately 30,000.** The power input and output are also completely and individually isolated. The "MAS" magamps are manufactured to MIL-T-27B standards. Units are housed in a hermetically sealed steel case with plug-in octal compressed glass terminals. The "MAS" magamps are 3 inches high with a 1½ inch diameter and weighs approximately ½ pound.

The "MAS" magamps have many advantages over other active circuit elements such as tubes, transistors: • Long life and years of maintenance free operation due to magnetic characteristics and solid state elements. • Ruggedness can withstand high shock, vibration, radiation, and moisture. • Reliability — can withstand 10 times overloads and operate into short without damage.

Possible applications include: • Control Amplifier • Photocell • SCR Controls • Strain Gauge Amplifier • Meter Preamps • Thermocouple • Differential Amplifier • Signal mixing, summing, integration • Hydraulic Servo Valve Driver • Servo Motor • Linear Amplifications of Transducer Signals.

NEW "PIL"* AUDIO TRANSFORMERS

For other PIL'S see page 4.

Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

These units are the smallest audio transformers available. The DO-T type structure incorporated overcomes inherently poor electrical characteristics usually found in miniature audio transformers. These ultraminiature PIL transformers are engineered to provide top electrical performance. All units are subjected to a 500 volt dielectric strength test, instead of the usual 100 volts, for higher safety margins and reliability.

Units are designed to a field-proven, ruggedized construction with a completely rigid cylindrical bobbin eliminating wire movement and stress. The turns are circular, effecting uniform wire lay and eliminating corner stress. The leads are rigidly anchored to the coil wire terminal board fashion, eliminating the use of tape, and brought out through strain relief. The units are terminated in weldable and solderable, insulated Gold plated Dumet leads. **Dim:** ⅝" dia. x ⅜" h., 1/20 oz.

All units are metal encased to Grade 4. Units made to Class S are available on special order. U. S. Patent No. 2,949,591.

PIP* SERIES TRANSISTOR PULSE TRANSFORMERS

UTC's PIP series of subminiature transistor type pulse transformers is designed to give a maximum of component density in equipments, their configuration being especially compatible with transistors. The design is based on the UTC DO-T and DI-T series to impart exceptional reliability. PIP-1 through PIP-9 have a ratio of 4:4:1, PIP-10 through PIP-12 have a ratio of 5:3:1. All units are checked and adjusted in a transistor test circuit to give the required pulse width.

Hermetically sealed, manufactured & guaranteed to MIL-T-20138B by full environmental testing . . . all units, completely METAL CASED, MIL type TP6RX4410CZ. See UTC page 8 for other miniature pulse transformers.

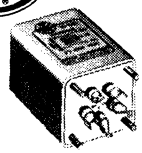
Designed, Manufactured and Successfully Tested to Complete MIL-T-27B Specifications.

TRANSISTOR SUPPLY TRANSFORMERS



Primary 115V. 50/60 Hz (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.C.T.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding. All units MIL type TF4RX02.

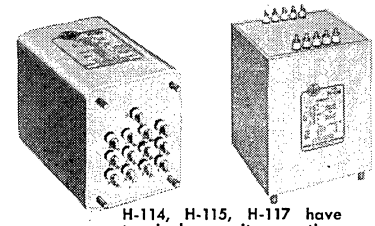
HERMETIC SEALED POWER and PLATE TRANSFORMERS



H-114, H-115, H-117 have terminals opposite mounting.

Power transformers: primary 115V, 60 Hz suited to 50* - 1000 Hz service. Plate transformers: primary 105/115/210/220 volts, 50/60 Hz. "L" ratings are choke input . . . "C" ratings are condenser input. H-80 thru H-197 MIL type TF4RX03, H-110 thru H-117 MIL type TF4RX02. The tapped high voltage winding provides either of two secondary voltages for greatest versatility. The power transformer listings indicate DC voltages and permissible currents for both choke and condenser input filters, as well as for military and industrial applications.

"W" suffix units designed for full wave center tap and full wave bridge application. Center tap of secondary may be disconnected from ground.

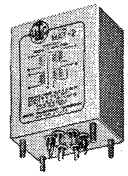
MAT* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

For NEW Magamps see page 3.

VACUUM TUBE TYPE



The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 Hz servo motors. They are compact...hermetically sealed...maanetically shielded...and meet MIL-T-27B and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 Hz, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 Hz with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the *Magnetic Structure* is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift.

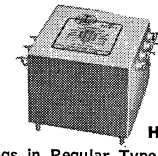
ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simulates battery operation for critical circuits requiring extreme isolation from power line.



HIT*

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD. For this purpose shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from −70° C. to +130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.

See PIP pulse units on UTC page 4.

INTERSTAGE AND LINE FILTERS

Available in stock frequencies listed below (numerical part of type —number is cutoff frequency in Hz). Compact shielded cases hermetically sealed to MIL-F-18327C specs. BMI, LMI, BML cases: 1 3/16" x 1 11/16" x 1 5/8" h.; wt., 6 oz. HMI, HML, LML cases: 1 3/16" x 1 11/16" x 2 1/2" h.; wt., 9 oz. The BMI filters are band pass interstage units designed to operate between a vacuum tube plate (or 10,000 ohms) and a grid. They provide a gain of 2 at center frequency.
BTI units are same as BMI, but 10,000 ohms output.
BML band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.
HMI filters are high pass interstage units.
LMI filters are low pass interstage units.
HML filters are high pass with input and output impedance of 500/600 ohms.
LML filters are low pass filters with input and output impedance of 500/600 ohms.
LLP low frequency low pass filter, loss of less than 40 db at 20 Hz. Source & load 100K ohms.

HIGH Q TOROID INDUCTORS

Favorites for over fifteen years, UTC HQ Toroids are only excelled by the preferred new "M" series. As typical Q curves show, HQ coils are available for application from 100 Hz to 100 kHz. Adjusted to 1%, the inductance is virtually independent of frequency, temperature, and vibration. Voltage stability is excellent, and shielding case assures 80 db coupling attenuation. Hermetically to MIL-T-27B. All units MIL type TF4RX-20YY.

HIPERMALLOY* TRANSFORMERS

Hipermalloy audio and power transformers are specifically designed for portable and compact service. High fidelity though light in weight and dependable. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 Hz. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

Primaries for 105, 115, 220, 230 volts; 50/60 Hz. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 Hz in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

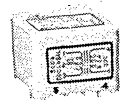
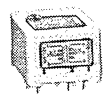
MINIATURE, OUNCER, SUBOUNCER & SUB-SUBOUNCER UNITS

SUBOUNCER*& SUB-SUBOUNCER*AUDIO TRANSFORMERS
TRANSISTOR & TUBE TYPES HERMETICALLY SEALED





Designed, Manufactured and Successfully Tested to complete MIL-T-27B Specifications.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

SO-#P UNIT Dim. ¾x1x$^{23}/_{32}$" Pin Length ¼" Wt. .....05 lb.

SSO-#P UNIT Dim. ¾x⅞x$^{9}/_{16}$" Pin Length ¼" Wt. .....04 lb.

SML-70 ⅛x$^{3}/_{64}$x$^{9}/_{16}$" Wt. .2 oz.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 Hz to 20 kHz. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

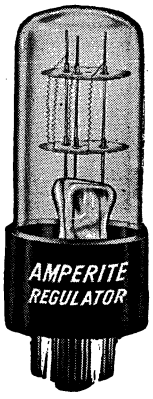
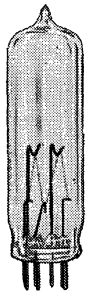
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE



STANDARD



MINIATURE

AUTOMATIC REGULATION

WHAT IT IS

The *AMPERITE Ballast-Regulating Tube* is an automatic *"rheostat"* designed to keep the current in a circuit at a definite value, for example, 0.5 amp.

Should the supply voltage increase, the *Amperite* will automatically increase in resistance enough to take up the increase in supply voltage — keeping the voltage on the load constant. It consists of an iron wire *hermetically sealed* in a bulb containing *hydrogen* or *helium* — the two gases with the *highest heat conductivity*. Its regulating action is based on the high temperature co-efficient of resistance of the iron wire and the rapid cooling of *hydrogen* or *helium* gas.

Being a constant current device, the *AMPERITE Ballast-Regulating Tube* can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

GENERAL ADVANTAGES:

• Light, compact • No moving parts • Rugged; will withstand vibration of 10G. minimum • Hermetically sealed; not affected by altitude or humidity changes • Can be changed as easily as a radio tube • Operates equally well on A.C. or D.C. • Inexpensive

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended	**2000 Hours**
If operated continuously at maximum voltage	**1000 Hours**
If operated continuously at 80% maximum voltage	**5000 Hours**
If filament is operated below glow point	**5000 Hours up**

In operation, the *Amperite* filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning *Amperite* on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an *Amperite Ballast Tube* depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

Amperite Number	3-4	3H4	10-7	12-11	12H11
Threshold Current	0.3	0.35	1.0	1.2	1.25
Threshold Voltage	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

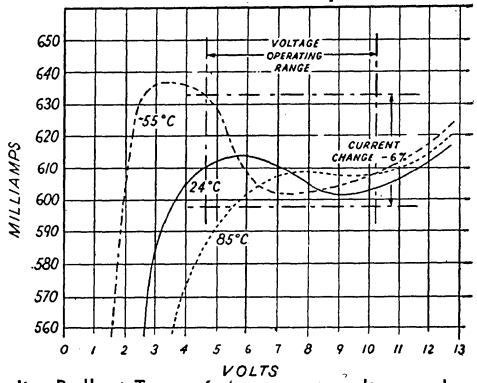
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

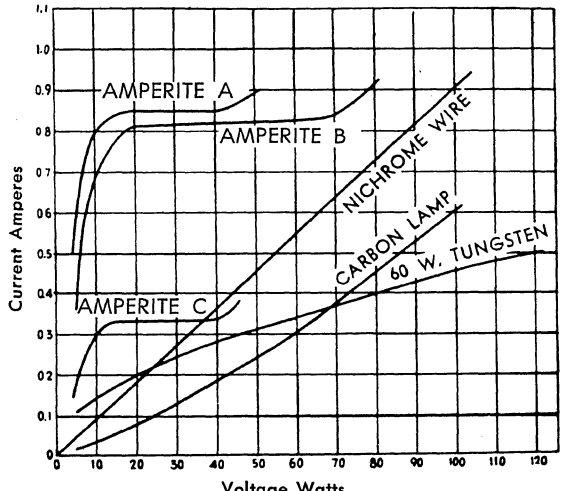
AMBIENT EFFECTS

Ambient temperature variation of −50° to +70° C will change the current value of an *Amperite* approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the *Amperite* is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.



Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of −55°, 24°, and 85° C. The percentage change with ambient is approximately the same with all type *Amperite* ballasts.

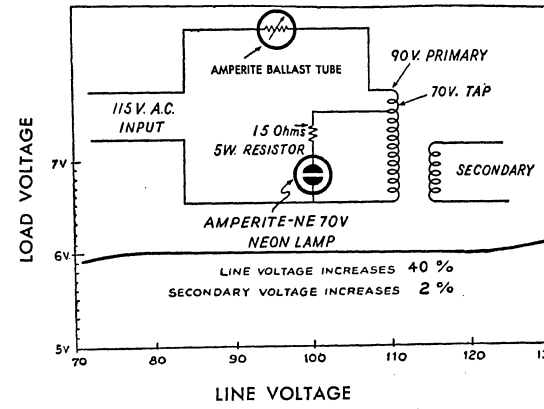


This diagram illustrates far superior regulating characteristics of the *Amperite* Ballast-Regulating Tube.

STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of *Amperites* of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to ± 1%. Advise voltage variation and currents desired.



A light, compact, and inexpensive method of obtaining close regulation is to use an *Amperite Ballast Tube* with an *Amperite* Neon Lamp — type NE70V. Base octal-base wiring-prongs 2-5. One NE70V is used for all loads up to 100W.

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

POWER SUPPLY	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	11.4-13.8V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	12.4-12.8V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	5.3- 7.4V	9.6-19.2V	15- 30V
Current Variation	.29-.32a	.29-.32a	.29- .32a	.29- .32a	.29-.32a

The above chart shows the maximum load voltage for the given supply to obtain ± 2% current regulation on load. Better regulation is obtainable by increasing the voltage across the **AMPERITE.** Up to a point, the higher the percentage of the supply voltage taken up by the **AMPERITE,** the better the regulation.

Radio tube filament loads — have low cold resistance which causes a high initial surge. For such loads we recommend a bleeder of 20 to 50% prox. of load and the corresponding **AMPERITE.** e.g.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9H4	0.95a

On Radio tube filament loads the bleeder will also improve the regulation.

18 VALUE-ANALYZED benefits of G-E 5-Star Tubes...

- Controlled inside diameter on bulbs reduces vibrational output and microphonics.
- Highly efficient getter performs throughout tube life and guides flash to avoid inter-element leakage.
- A getter flash shield improves initial leakage characteristics.
- Two double mica spacers, with additional anti-leakage slots, brace internal parts, provide superior inter-element insulation and improve vibration characteristics. 12 or 16 contact points give firmer fit between bulb and mount.
- Short, sturdy cages increase rigidity of tube structure.
- Plate ears are embossed for added strength and improved mica fit.
- U-bolt construction through top and bottom micas firmly secures the cage assembly.
- Smooth grid legs prevent a "sawing" action on the mica, reducing grid vibration and microphonic noise.
- Critical grids are plated with gold or silver to minimize grid emission.
- Passive cathode alloys assure reliability and long life in low-duty cycle circuits where interface tends to develop.
- Outside diameter and density of cathode coating are statistically controlled.
- Low thermo-conductivity cathode tab reduces heat loss.
- Cataphoretic coating of all heater bends after forming insures complete heater-cathode insulation.
- Folded heater design proved most reliable under shock, vibration and heater cycling conditions. Heater is temperature-controlled to further improve reliability and lengthen life.
- Rhenium-tungsten heater material increases tensile strength, reduces brittleness, and allows larger-diameter heater wire.
- Lead-glass stems help ward off glass electrolysis.
- Pins are annealed to prevent glass strain at socket insertion.
- Stem design minimizes welds — fewer points of possible failure — less change of short-causing particles from weld splash.

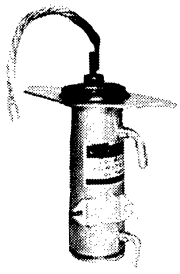
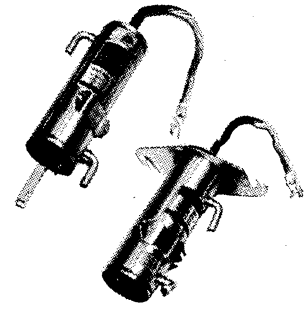
Ignitrons

GENERAL ELECTRIC



Ignitrons are gas-discharge tubes employing a mercury pool as the cathode. The mercury pool cathode provides extremely high emission capability. Initiation of conduction in the ignitron is accomplished by means of a starting electrode called the ignitor. The ignitor is a small rod of highly refractory material which dips into the mercury pool. The passage of ignition current through the ignitor causes a cathode spot to form at the junction of the ignitor and mercury pool. Ionization from the cathode spot spreads throughout the volume of the ignitron and when the anode is positive electrons flow to it. By control of the point in the A-C cycle at which the ignitor is fired the duration of current flow through the ignitron is controlled. The ignitron, therefore, is ideally suited for high current rectification and control service. The following charts present summarized rating information for General Electric ignitrons. All ratings are based on 25-60 CPS operation. For convenience to the user the ignitron types are grouped by typical application service. Many types are rated for more than one service and therefore appear in two or more rating charts. More detailed ratings are available upon request for all of the G.E. ignitrons listed.



The ignitron has long been recognized as a long life, highly reliable device. As the industry's leading ignitron manufacturer General Electric is pleased to present the information contained in this booklet and invites your inquiry for additional application assistance if required.

Special Devices — Reed Switches

GENERAL ELECTRIC

In a relatively short period of years, the dry reed switch has begun to play an important role in performing the switching function for a wide variety of electronic/electro-mechanical equipment. Major application, now in general use, range from telephone switchgear, appliances, and data processing units to logic circuitry for industrial controls.

The General Electric reed switch capsule consists of a pair of low reluctance, magnetically actuated, flat metal reeds, hermetically sealed in an atmosphere of dry inert gas. The reeds are of equal length and are supported as cantilevers, overlapping at the center of the glass cylinder where they are separated by a small air gap, thus forming a normally opn Single Pole, Single Throw (SPST) switch.

(14) Diffused gold contacts with both leads tinned and bent on 90° angle.

(15) Full load, 125 volts d-c, 60 operations per second.

(16) The voltage rating is a "hold-off" value, and the current rating is a measure of the current the contacts will carry but not switch. Maximum permissible switching currents are to be determined.

(17) Sensitivity measured using a 5,700 turn coil of #36 wire wound on a 2.0″ long bobbin having an oval cross-section of approximately 0.5″ x 0.28″.

(18) Rhodium-plated contacts with both leads tinned.

Special Devices—Tungar Bulbs

GENERAL ELECTRIC

The Tungar bulb developed by General Electric in 1916—and used for rectification of a-c to d-c is well known wherever battery charging or similar applications require d-c power.

NOTES

* Except for Cat. Nos. 16X897 and 45X674 which have coated filaments.

† Cat. No. 206501 is identical to Cat. No. 12X825 except that it is fitted with an adapter to take a clip anode lead and fits a standard Edison socket.

[1] Under normal ambient temperature conditions, this tube will deliver 90 percent of full output within three seconds after the simultaneous application of anode and filament voltages. Longer tube life can be obtained by applying anode voltage 1 to 3 seconds later than the filament voltage

[2] Under normal ambient temperature conditions, this tube will deliver 80 percent of full output within three seconds after the simultaneous application of anode and filament voltages. Longer tube life can be obtained by applying anode voltage 1 to 3 seconds later than the filament voltage

[3] The preheating time listed must be respected and filament excitation must be continuous if guarantees are to apply. When first installed in a new location, this tube should be operated for 10 minutes with filament voltage only.

[4] Full output can be obtained as soon as power is applied to the anode after preheating time. The recommended tube preheating time must be respected and filament excitation must be continuous if guarantees are to apply.

IGNITRONS

Ignitrons are gas-discharge, pool-type cathode tubes in which current conduction is initiated for each conducting cycle by means of an electrode called an ignitor. The ignitor is a small conical refractory element projecting into the mercury. When a relatively small current is conducted through the ignitor to the mercury, ionization of some mercury molecules in this area takes place. Ignitrons are of the half-wave type and current is conducted only when the anode is positive with respect to the cathode and the ignitor is fired.

Control of the average conducted current is accomplished by phase control of the point in the input cycle at which the ignitor is fired. During the non-conducting cycle, ionization in these single-anode tubes is very low; the resulting reduction of shielding necessary to prevent arc-backs lowers the arc voltage and permits operation at lower supply voltages. Ignitrons therefore have some of the control characteristics of thyratrons and, having a mercury-pool cathode, are capable of conducting very large currents. Water cooling of metal envelopes is used on most types to further increase current carrying capacity in a compact tube. Provision is made on some of the tube shells to connect thermostats for tube protection and water saving. Ignitrons are used in resistance welders, frequency-changer resistance welders, power rectifiers, high current switches in controlled fusion equipment, heat control devices for air-frame testing, and any circuit requiring precise control of large amounts of alternating or direct current.

VACUUM MEASURING TUBES

Vacuum measuring tubes are designed to become part of an evacuated system. With suitable circuitry, the pressure in that system may be accurately determined. The Bayard-Alpert ionization gauge is used for measurement of very low pressures. The Schulz-Phelps ionization gauge measures pressures up to one half torr. The Pirani and thermocouple gauges are less accurate and measure only the higher pressures, but, their associated circuitry is much simpler.

These tubes are used in electron tube and semiconductor device processing control, vacuum deposition, research and rocket altimeter applications.

RG SUBMINIATURE CABLE

AMPHENOL line of subminiature coaxial cables were created for use in any miniaturized electronic application. Teflon dielectric subminiature cable is able to withstand continuous operating temperatures up to 250°C. Teflon jacket is weatherproof, chemically inert, insoluble in liquids and gases.

The polyethylene dielectric miniature coaxial cable is intended for use where extremely high temperature is not a consideration.

CATV CABLE

AMPHENOL Polyfoam® Communications and TV Cables are designed to satisfy the need for a low attenuation, low capacitance RF cable for the communications field.

All cables illustrated are available in 1000 foot continuous lengths.

Note: * Add the following suffixes to the Amphenol Number for sweep testing:
—101 (sweep tested from 50 MC to 90 MC and 170 MC to 220 MC).
—202 (sweep tested from 10 MC to 250 MC).

TRIAXIAL CABLES

AMPHENOL Triaxial Cables satisfy the need for a high degree of shielding in a flexible transmission line. This is achieved by adding a high coverage braid over the cable jacket and then applying a second or outer jacket. This cable can be used to carry two separate signals.

LOW NOISE CABLES

AMPHENOL Low Noise Cable fulfills the need for cable which will remain electrically neutral under conditions of shock and vibration. The reduction of inherent noise is achieved on these cables by the application of a semi-conductive coating over the dielectric.

TYPE B—UNCOVERED PLASTIC

Pre-Bonded Tinned Copper Conductor

DESCRIPTION:
Each strand of the conductor is double tinned and then heated, which bonds the individual strands together for easy stripping. Color coded .010″ polyvinylchloride insulation. The insulation meets requirements of MIL-W-16878D.

CHARACTERISTICS:
Temperature rating —55°C to +105°C. Voltage rating 600 volts. Resistant to acids, alkalis, oil, flame, moisture, solvents, and fungus.

APPLICATION:
A pre-bonded conductor is the ideal construction when leads are to be cut and stripped for point to point wiring. The pre-bonded conductor maintains much of the flexibility of an ordinary stranded wire but reduces processing and handling costs on soldering, retwisting of strands after stripping and hand tinning operations. Since the individual strands are bonded, expensive induction heating equipment is unnecessary.

Alphlex® Polyvinylchloride Plastic Tubing (PVC-105)

CONFORMS TO MIL-I-631D †

DESCRIPTION: The superior mechanical, thermal, and electrical properties of Alphlex PVC-105, coupled with its economical cost have led to an ever increasing use of this all-purpose insulating material. Another major advantage of Alphlex PVC-105 is its high degree of flexibility, which is maintained even under severe environmental conditions.

Rated for temperatures as high as 105°C, PVC-105 has a high dielectric strength that remains unaffected by increasing temperature throughout its range. PVC-105 maintains a high resistance to the agents of heat, oil, chemical corrosion and fungi with no loss in tensile strength, or flexibility. Other features include an exceptional resistance to abrasion and indefinite shelf life.

Alphlex PVC-105 is compounded with first quality, non-migratory resinous type plasticizers. Carefully selected stabilizers and modifiers added in the manufacturing process, counteract chemical and environmental degradation. Under adverse conditions Alphlex PVC-105 retains its flexibility which permits it to cling to and protect irregular shapes. An unusually simple to handle insulating material, PVC-105 "snakes" well under all environmental conditions.

APPLICATIONS: Designed and manufactured for general electronic, aircraft and electrical applications involving temperatures as high as 105°C. Especially useful to protect wires and cables subject to abrasion or where a flexible tubing with a high degree of resistivity to oil, chemicals or solvents is necessary.

Alphlex® Teflon Extruded Tubing

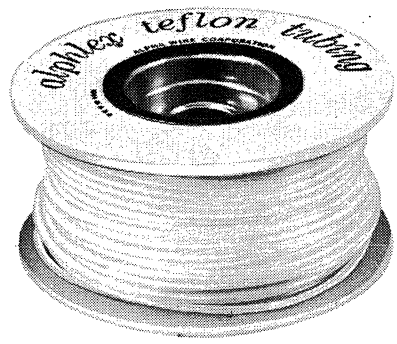
CONFORMS TO MIL-I-22129B

DESCRIPTION: Alphlex Teflon Tubing is unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures. Teflon is rated for continuous operation at 250°C, and retains an exceptional toughness and its flexibility throughout its temperature range.

Alphlex Teflon Tubing has the further advantage of a high degree of resistance to flexural fatigue and repetitive stresses; coefficient of friction lower than that of any other known solid; and a dielectric constant and power factor lower than that of any other known solid. This tubing will not crack or become brittle during aging.

Because of its resistance to soldering iron temperature, Alphlex Teflon Tubing will not shrink back during the soldering process. Alphlex Teflon Tubing will not melt and flow as do conventional thermoplastic materials. At high frequencies, its dielectric strength is many times that of other insulating materials.

Alphlex Teflon Tubing is chemically inert, has zero moisture absorption and its insulation resistance properties are unaffected by heat aging or temperature use up to 250°c.



APPLICATIONS: A thin flexible insulation, Alphlex Teflon Tubing permits a miniaturization and compactness of design never before possible. Invaluable in any application where a high heat resistant, flexible, non-flammable, chemical solvent and corrosion-resistant material is required.

Irradiated Polyolefin Tubing

NEW ALL-PURPOSE SHRINKABLE TUBING — FIT-221

- **SHRINKS 50% (2:1 RATIO) WITH ONLY 5% LONGITUDINAL SHRINKAGE**
- **FEWER SIZES COVERING MORE APPLICATIONS**
- **AVAILABLE TO MEET U.L. SPECIFICATIONS**
- **MEETS MIL-1-23053A (WEP)**
- **AMS SPECIFICATIONS 3636A (COLOR), 3637 (CLEAR)**

DESCRIPTION: Alphlex FIT-221 Shrinkable Tubing, when heated, forms a tight-mechanical bond, even over irregularly shaped materials. FIT-221 is available in a range of colors and in clear.

FIT-221 is an all-purpose polyolefin extruded tubing that is simple to use and provides a tight mechanical bond. FIT-221 is an irradiated, thermally stable, modified polyolefin base product. FIT-221 Clear may be used so that jacketed, printed components or cable data is clearly visible and inspection of insulated components, cables or terminations is simplified.

The tubing is supplied in an expanded form and easily slips over the object to be covered. When a temperature of approximately 275°F (135°C) is applied, it immediately returns to its predetermined size (approximately one-half smaller) and forms a permanent tight-fitting mechanical bond. FIT-221 Tubing will not cold-flow or melt but retains form stability throughout its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is 5% maximum when completely recovered.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 225°F to 255°F. Shrinkage will begin at 235°F, but at a somewhat slower rate. When using an oven, temperature may range from 235°F to 300°F. Prolonged exposure to these temperatures will not affect the physical or electrical properties of FIT-221 Shrinkable Tubing. FIT-221 Clear Tubing remains transparent over its entire operating range of −55°C to 135°C.

FLAMMABILITY: Although FIT-221 Clear is a high temperature material, it is flammable and will burn. However, when the tubing is shrunk over non-flammable or flame-resistant components, such as connectors, terminals and wire, the entire assembly will not support combustion.

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

Irradiated Polyvinylchloride Tubing FIT-105

All Types of FIT Tubing are available from stock and may be cut and/or marked to your specifications.

HIGHLY FLEXIBLE — IDEAL FOR CABLE JACKETING

Conforms to MIL-1-631D, Type F, Form U, Grade C, Class 1, Cat. 1

SHRINKAGE RATIO 2:1 (50% Shrinkage)

DESCRIPTION: Alphlex FIT-105 is an easy-to-use modified polyvinylchloride that provides a snug, extremely flexible insulation.

Because of its flexibility, strength and its ability to shrink 50% on application of heat, FIT-105 is ideally suited for insulating components and cables with a wide variation in shape and diameter.

Because of the 50% expanded diameter of FIT-105 Tubing, it is an extremely useful cable jacketing material. Cable cores may be pulled through FIT-105 Tubing with comparative ease and shrunk down to form a jacket with all the qualities of the finest extruded plastic jackets.

The tubing is supplied in expanded form and in continuous lengths. When a temperature of approximately 347°F (175°C) is applied, Alphlex FIT-105 Tubing immediately returns to its predetermined size (approximately 50% smaller), and forms a permanent, tight-fitting mechanical bond. FIT-105 Tubing will not cold-flow or melt but retains form stability within its temperature range. No radioactivity exists in or on the material and it will not emit radiation. Longitudinal shrinkage is less than 10%.

Controlled shrinkage to the correct predetermined size takes place within seven seconds at 325°F, or above. When using an oven, temperature may range from 325°F to 350°F.

The Beldfoil ISO-Shield Story

Much of today's miniaturized, high-gain electronic equipment calls for small diameter cables that are lightweight, flexible and has total electrostatic shielding.

Wire braid and serve type shields have a practical range up to 97 percent maximum coverage. While they provide sufficient electrostatic shielding for many applications, they do not furnish the full-coverage shielding required by many high-gain electronic systems.

Beldfoil ISO-Shield provides 100 percent coverage and adds greater effectiveness to all major shielding functions: excluding external signals, confining the transmitted signal and minimizing crosstalk.

Beldfoil ISO-Shield uses a thin layer of aluminum bonded to a polyester film. The aluminum provides the necessary electrostatic shielding while the polyester film adds a bonus insulation and increased mechanical strength. The 100% shielding is accomplished by an exclusive method of folding back both edges of the tape in such a way as to provide metal-to-metal contact between adjacent wraps, thus providing the same shielding effect as a continuous aluminum tube. As a direct result of using this thin layer of aluminum-polyester shielding, Beldfoil ISO-Shield is lightweight, flexible and small in diameter. Depending on the cable type the polyester film may be used to increase the dielectric strength between the conductors and the shield, or to provide insulation between adjacent shields.

Applications for Beldfoil ISO-Shield range from a single conductor audio and sound cable to complex multiconductor multi-shield cables. They include cables for data processing systems, telemetering equipment, strain gauge applications, hi-fi systems, instrumentation, TV cameras and receivers, microphones and communications equipment plus many special constructions for both military and commercial use.

COMMUNICATIONS CABLE

Belden offers a complete line of Communications Cables to provide customers with the best all-around cable for every application requirement. Cables are available in a wide range of sizes, dimensions, shielding constructions and types of insulation. All Communications Cables are designed to protect the desired signal by eliminating or minimizing the interference of hum, noise and crosstalk.

SHIELDING: Because it affords such excellent protection, Beldfoil ISO-Shield is now being specified for many critical applications such as instrumentation systems, tracking station equipment, computer and data processing systems, audio, sound, strain gauge and control cables.

No other type of shield on the market surpasses Beldfoil Shield for full coverage and protection against radiation and penetration at audio and radio frequencies. Beldfoil's unique polyester-aluminum shielding provides 100% coverage.

Braided Copper Shields have high tensile strength and are very effective at audio and radio frequencies in flexing applications. Served Copper Shields usually provide more coverage than Braided Copper Shields; they're also easier to terminate. Both Braided and Served Copper Shields are recommended at audio frequencies.

INSULATIONS: Belden's Communications Cables are available in a variety of insulation materials, each having its own advantages depending upon the size requirements, environmental and electrical conditions dictated by the application.

Vinyl insulation resists flame, most solvents, oil, ozone and sunlight. It has a higher dielectric constant and capacitance than polyethylene. Therefore it is recommended for audio frequency applications. It is easy to strip.

Polyethylene insulation is lightweight and resists ozone. It has a low dielectric constant for low capacitance and provides low electrical loss and is recommended for audio and radio frequency applications. Like vinyl, polyethylene is easy to strip.

Polypropylene insulation provides excellent heat and abrasion resistance. It has a low dielectric constant with equally low capacitance. It is less flexible than polyethylene. Because it has excellent dielectric strength and mechanical ruggedness, polypropylene insulations are widely used for miniaturization applications. Even with low overall diameters, they permit very low loss. Recommended for audio and radio frequencies.

INSTRUMENTATION CABLES

Instrumentation cable provides the vital communications link between sensing devices and read-out equipment. Because of the many and diverse conditions of environment and stress under which instrumentation cables must transmit information — in usable form, without distortion or change — cable characteristics should always be carefully matched with the specific requirements of the particular application.

The scientific, medical and industrial uses of instrumentation cable are vast and ever growing. Some of the common uses for instrumentation cable are such things as measuring pressure, speed, resistance and temperature.

Belden manufactures a wide variety of precision instrumentation wire using several types of insulating materials for conductors and shields to meet a wide variety of electrical, physical and thermal requirements.

Many Belden Instrumentation Cables are unique in the field and have been engineered for specific application problems.

AUDIO CABLE SELECTION GUIDE

The length of cable run for a given wire size can be doubled if twice the power loss can be tolerated in the cable.

The next smaller size can be used when twice the power loss can be tolerated in the cable and the length of cable run remains the same.

To use this chart for constant voltage systems, determine the load impedance using Step 1 below. If this impedance does not appear on the chart, use Step 2 to determine the maximum length of cable run for each wire size.

The choice of appropriate audio cables for runs of varying distances depends on many factors such as amplifier voltage output and power level as well as load impedances and the percent of power loss which can be tolerated. For this reason it is not practical to provide a general chart showing the recommended wire size for all conditions. The chart shows the maximum recommended cable runs for various wire sizes selected for commonly encountered load impedances.

Wire Size (AWG)	Maximum Length of Cable Run (Ft.)					
	Low Impedance — 10% Power Loss			High Impedance — 5% Power Loss		
	4 OHM	8 OHM	16 OHM	100 OHM	250 OHM	500 OHM
14	88	176	352	1045	2610	5220
16	55	110	220	630	1574	3150
18	35	70	140	410	1020	2050
20	22	44	88	262	655	1310
22	13	26	52	164	410	820
24	8	16	32	105	262	525

STEP ONE

$$Z\ (\text{Load Impedance}) = \frac{E^2\ (\text{Voltage} \times \text{Voltage})}{P\ (\text{Watts})}$$

STEP TWO

$$\text{Ft. (Max.)} = \frac{\text{Ft. (chart)} \times Z\ (\text{Load Impedance})}{Z\ (\text{chart})}$$

FOR EXAMPLE

Find maximum length of run for #20 AWG pair in a 70 volt, 25 watt system.

1. $Z = \frac{70 \times 70}{25} = 196$ Ohms

2. Ft. (max.) $= \frac{262 \times 196}{100} = 513$ feet

Belden | microphone and shielded power supply cables

MICROPHONE CABLES

Belden Microphone Cables are designed for flexible service at audio frequencies. They are used not only for microphones, but also for home entertainment equipment, instruments, tape recorders and shielded power supplies.

Shielded single conductor cables are used in high impedance systems, while multiple conductor cables are used in low impedance applications.

All cables are precision-engineered and manufactured to transmit clear signals and to cancel out hum pick-up and crosstalk interference. They are designed to withstand the flexing and normal abuse of studio, laboratory and home usage.

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.
NEOPRENE AND HYPALON CABLES RECOMMENDED FOR: Outside use, cold weather applications. Resistant to effects of sun, oil, and ozone.

Presenting Belden's

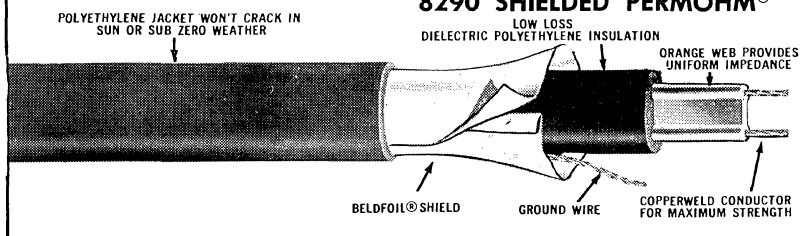
COLOR TWINS

Now, there's a Belden quality TV antenna wire just right for color and UHF TV reception in both congested and uncongested areas.

With today's strong emphasis on quality UHF and color TV programming and equipment, the importance of the transmission line connecting the outdoor antenna and TV receiver is critical. Until recently, there's been a big quality gap — a missing link — between the best engineered color TV sets and the finest TV antennas.

Belden's Color Twins were specially engineered to provide color and black/white, UHF and VHF TV reception in congested close-in areas and uncongested fringe areas.

8290* SHIELDED PERMOHM®



Designed to provide superior VHF, UHF, B/W and color TV reception in congested areas where reception is critical. Beldfoil shielding assures a clean, strong signal by eliminating transmission line pick-up of ghost signals and electrical noise (including automotive ignition noise). Belden's 8290 can be installed underground, in gutters, and conduit. 8290 can simply be taped to mast.

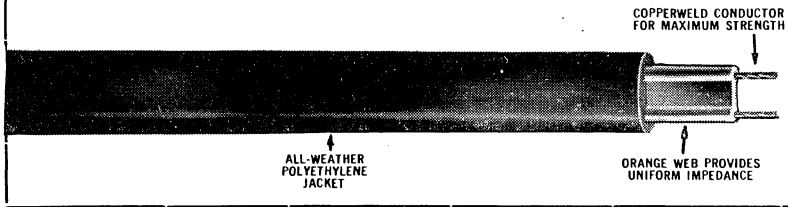
8285* PERMOHM®



Provides superior VHF, UHF, B/W and color TV reception in uncongested or fringe areas. Especially designed to deliver more signal to the receiver than any other unshielded twin lead. The special polyethylene jacket protects the major portion of the energy field. Provides highest efficiency of any available unshielded transmission line, even when exposed to smog, moisture, weathering and industrial atmospheres. Does not require expensive matching transformers and connectors.

	CELLULINE maintains uniform electrical characteristics by eliminating all possible moisture between conductors. Installation is easier because no end-sealing is necessary. Losses are lower because of its lower dielectric constant (1.5). *The thick outer wall of brown polyethylene protects the cable from abrasion and sun damage; the round shape offers less wind resistance. The result is a longer lasting, more efficient line. Recommended for black and white VHF and local UHF reception.*

HIGH VOLTAGE CABLES

Belden High Voltage Cables are designed for use by public utilities and laboratories in testing high voltage equipment and apparatus. Through their use, potentially dangerous conditions can be detected both before installation and at intervals during service.

Belden High Voltage Test Cables are engineered to achieve the best possible performance at continual rated voltages. Their special design incorporates the use of conductive polyethylene over the center conductor, bonded to the polyethylene dielectric material. This provides uniform voltage stress distribution around the center conductor and results in an increased elimination of degradation due to internal corona.

For special cables up to 600 KVDC ratings, please ask for individual quotation.

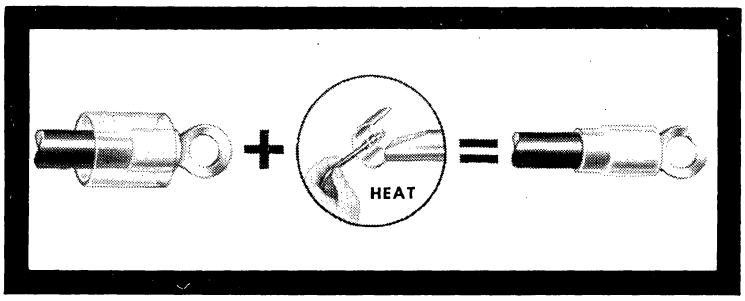
heat shrinkable tubing | Belden



Belden provides a complete line of heat shrinkable tubing in order to meet the many, diverse application requirements of the electronics industry. Belden Heat Shrinkable Tubing is available from stock in a full range of colors, sizes and lengths in three basic types—all conveniently packaged for easy handling and use. All Belden HST products are manufactured to exact specifications in order to assure dependable production-line uniformity of diameters, shrink-down and electrical properties.

HST 1: BELDEN IRRADIATED POLYOLEFIN HEAT SHRINKABLE TUBING

Belden HST-1 meets all industry standards and size specifications. It is thermally stabilized and homogeneous in nature. HST-1 is essentially free from flaws, defects, pin holes, bubbles, seams, cracks or inclusions. When heated to 275°F, it shrinks to 50% of its original diameter, and when fully shrunk, its longitudinal change is less than 3% of its original length. It is solvent and fungus resistant and has a maximum water absorption of only 0.1%. Belden HST-1 meets or exceeds MIL-I-23053(WEPS)Revision A.

HST 2: BELDEN IRRADIATED POLYOLEFIN HEAT SHRINKABLE TUBING

Belden HST-2 combines flexibility with abrasion resistance. It is flame retardant and offers excellent dielectric and mechanical strength. It is essentially free from flaws, defects, pin holes, bubbles, seams, cracks or inclusions. When heated, it shrinks to 50% of its original diameter and, when fully shrunk, its longitudinal change is less than 10% of its original length. It is impervious to solvents and resists water absorption. It is recommended for most commercial uses that do not require the more costly inspection of military specifications.

HST 3: BELDEN VINYL HEAT SHRINKABLE TUBING

Belden HST-3 Polyvinylchloride Heat Shrinkable Tubing has an extra thin wall for excellent conformability. It is flame retardant and offers outstanding physical and electrical properties. When heated, it shrinks to 50% of its original diameter and when fully shrunk, its longitudinal change is less than 15% of its original length. All colors (except black) are translucent which permits the enclosed object to remain visible. HST-3 is especially recommended for use in areas where space is critical or where flexibility is a requirement.

teflon wire | Belden

Teflon is a fluorinated thermoplastic with outstanding thermal physical and electrical properties. However, because the basic resin and processing costs are relatively high, Teflon is generally restricted to applications requiring its special characteristics.

Belden Teflon wire products are highly recommended for miniature cable applications, because of their superior thermal and electrical properties. Teflon is especially suitable for internal wiring soldering applications where insulation melt back is a specific problem. Belden Teflon wiring products are outstanding in their resistance to oil, oxidation, heat, sunlight, flame and their ability to remain flexible at low temperatures. They all have excellent resistance to ozone, water, alcohol, gasoline, acids, alkalis, aromatic carbon and solvents.

HPD HEATER CORDS WITHOUT APPLIANCE PLUG

Information and Application

HPD Cordage (Asbestos cotton braid) is recommended for irons and other appliances where flexibility of the cord is extremely important.

Glazed cotton HPD should be used for maximum resistance to abrasion.

All Belden Iron Cords use a fiber glass tie on the stripped conductors for ruggedness and to insure the smallest diameter for easy installation.

17729 has a special terminal finish. The braid is stripped 2¼" with a fiber glass tie, and the eyelets are for a #6 screw.

All cords have UL Green Flag Label.

These cords are offered in a wide variety of:

1. Lengths
2. Gauges
3. Colors
4. Cotton Types
5. End Finishes—
   - Stripped

HOW TO USE THE CABLE FINDER CHART

Match the desired "Number of Conductors" column with the required "Conductor Size" to find the applicable Belden Trade Number and its catalog page.

For cables with more than 8 conductors, see Multiple pair and unpaired unshielded cables on page 13 & 15, Multiple pair individually shielded on pages 9, 10 & 12. For cables combining shielded and unshielded conductors, see Special Audio and Communication cables on pages 10 & 11.

teflon wire

Teflon■ is a fluorinated thermoplastic with outstanding thermal physical and electrical properties. However, because the basic resin and processing costs are relatively high, Teflon is generally restricted to applications requiring its special characteristics.

Belden Teflon wire products are highly recommended for miniature cable applications, because of their superior thermal and electrical properties. Teflon is especially suitable for internal wiring soldering applications where insulation melt back is a specific problem. Belden Teflon wiring products are outstanding in their resistance to oil, oxidation, heat, sunlight, flame and their ability to remain flexible at low temperatures. They all have excellent resistance to ozone, water, alcohol, gasoline, acids, alkalis, aromatic carbon and solvents.

Birflon — TEFLON* SPAGHETTI TUBING

TFE EXTRUDED TUBING

T-500 T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures.

Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron — therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

ADDITIONAL ADVANTAGES OF BIRFLON T-500 TEFLON*

- **ELECTRICAL:** Low power factor, low dielectric constant, high volume and surface resistivity, good dielectric strength (500 to 1000 volts/MIL) constant over wide ranges of temperatures and frequencies. Dielectric constant of 2.0 and dissipation factor of 0.0002 are lowest of any solid dielectric.
- **THERMAL:** No change of electrical properties with temperature (25°C. to 250°C.) or frequency (60 CPS to 100 MC). Class C insulation — capable of continuous service at temperatures to 250°C. Has color stability.
- **TOUGHNESS AND FLEXIBILITY:** Has high impact strength. Is tough and flexible over the broad temperature range of —90°C. to 250°C. Service range —320°F. to 500°F.
- **CHEMICAL INERTNESS:** Completely inert to all chemicals and solvents except molten alkali metals and fluorine at elevated temperatures and pressures. Non-corrosive to all metals.
- **MOISTURE ABSORPTION:** Zero moisture absorption. Completely sun and weather resistant.
- **NON-FLAMMABLE** • **LOWEST COEFFICIENT OF FRICTION**
- **FUNGI RESISTANCE:** Inert to all fungi growths.
- **SIZES:** Birflon T-500 Teflon Tubing available in sizes to fit B & S gauge wires. Thin wall available from stock, in sizes No. 32 thru 1 1/4" I.D. Additional sizes and wall thicknesses made to order.
  Birflon T-500 is made from high molecular weight virgin "Teflon" and meets AMS 3651B, 3653B, 3654, 3655, MIL-C-17B and MIL-I-22129C.

NOTE: When cutting Teflon Tubing, use single edge razor blade for clean unpinched cut.

BIRFLON SHRINK SERIES TE TUBING

HEAT SHRINKABLE TEFLON* TUBING

Is a Class C material modified from polytetrafluorethylene. The tubing will shrink when heated to 621 F. (It should be heated until it turns semi-transparent, then the heating process immediately stopped. Overheating can cause splitting, therefore trial and error testing is recommended to establish the proper time and temperature for each application.) Correct procedure will result in a snug-fitting insulating wrap possessing hi-heat resistance, superior chemical resistance, and excellent electrical characteristics. The tubing is available in a full range of colors. Stock colors: black, white, natural.

* Dupont Polytetrafluoroethelene

RETRACTILE CORDS

This series of Birnbach Coiled Kinkless Retractile Cords are permanently coiled into a spring-like shape without the use of metal springs or elastic bands. They have inherent "Recovery" properties. These Retractile cords extend approximately six times its retracted length, returning to its original shape and length when released. Always as long as you need them and no longer, they will not kink, tangle, trail, knot or dangle on the floor or bench and cause accidents. Useful wherever cords or cables must change length or position.

TUBULAR BRAID PER MIL SPEC. QQ-B-575

Manufactured completely round as noted in MIL Spec. QQ-B-575, this tinned copper shielded braid has self-supporting characteristics which enables it to maintain its round shape. The shielding coverage percentage is 95% or more. This tubular braid is used in military applications where maximum shielding against electrostatic interference is indicated. In addition, it is used as a protective covering against mechanical abrasion and stresses for the wires, cables and other components.

HarnessRAP

This new spiral wrapping provides a readily flexible and strong protection for groups of conductors. Because of the facility with which it is applied it is particularly useful for temporary or experimental wiring as well as permanent installations. Leads can be brought out at any point to make a "tailor-made" harness, strong, secure, tight-fitting.

Harnessrap retains its elasticity and can be removed as easily as it is applied, then reused again and again.

Because of its flexibility it is especially useful for harnesses that carry wiring around sharp corners or that are subject to repeated flexing or bending.

FLEXFOAM ULTRA LOW CAPACITANCE MICROPHONE CABLES — EXCLUSIVE WITH COLUMBIA

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance. Color—Grey.

Also available in high gloss gleaming white jackets.

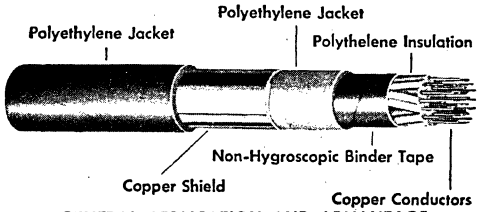
TELEPHONE AND COMMUNICATION CABLE DIRECT BURIAL TYPE FULLY COLOR CODED



GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in direct burial installations provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrically varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethlene jacket.

HEAT SHRINKABLE TUBING

SHRINKABLE IRRADIATED POLYOLEFIN TUBING

This series is designed for maximum mechanical strength at stress or points of connection. It is strong and abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables and irregular shaped objects. When exposed to heat (235°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. Meets or exceeds MIL-I-23053A Class 1 and 2. Available with UL approval. AMS 3636, 3637.

FEP TEFLON*, which has a continuous service temperature of 400°F., will shrink at 300°F. Supplied in natural color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON.* Will not burn or support flame, long lengths available. Extruded.

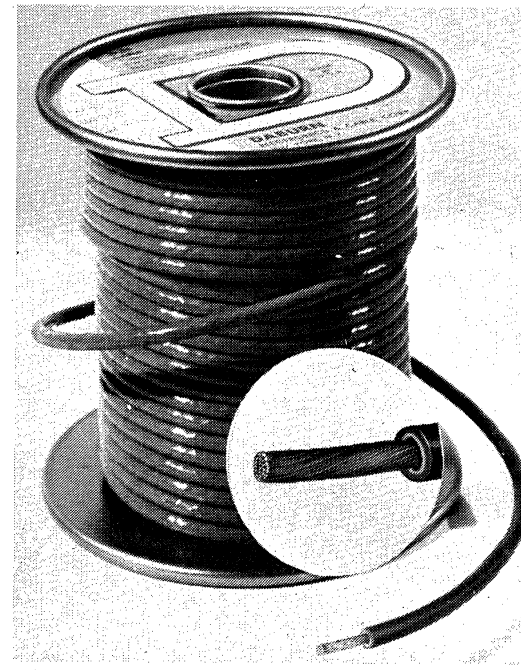
NEW CRT HI-VOLT CORONA RESISTANT TEFLON* CABLE©

Voltage Rating at Sea Level • Voltage Rating at 80,000 feet, approximately 1/3 lower
• Minimum life expectancy: 10,000 hours.



SMALL SIZE:
You do not need bulky, thick, insulation jacketing as used wtih silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878D. insulation used conforms and surpasses MIL-SPEC-W-16878D

AVOID CORONA PROBLEMS:
Corona resistant Teflon construction is specifically designed to retard and prevent corona penetration.
Temperature variations from −60° to +300°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

DESCRIPTION:
Single Conductor, Stranded Silver Plated Copper, Corona Resistant Teflon* Insulation.

TEMPERATURE RATING:
−90°C to +250°C.

VOLTAGE RATING:
Based on insulation thickness.

AVAILABLE COLORS:
White, Black, Red, Green, Yellow, Lt. Blue, Brown, Orange, Gray, Violet. (Also available in tracer colors)

☐ Stable operation – over wide temperature range.
☐ Outstanding flexibility – even at extremely low temperatures – for unimpeded camera movement.
☐ Abrasion resistant, sound absorbing jackets.
☐ Long trouble-free service life.
☐ Individual wires specially positioned and completely color-coded for easy termination.
☐ Weather and moisture resistant.
☐ Stable electrical characteristics, even when bent, compressed, and twisted.

SPIRAL WRAP®

This expandable spiral-cut plastic wrap harnesses, insulates and protects wire assemblies up to 8" diameter.

HARNESSING:

Spiral Wrap applies a strong grip developed both from its torsional cut and the memory of plastic materials used. It retains its strength under repeated flexing and bending, follows wire paths easily, and makes neat, free-running cables. It is extremely useful on long continuous runs where many leads are required; wires can enter or break out at any point. Spiral Wrap can be removed easily for trouble shooting and then re-applied.

PROTECTION:

Spiral Wrap is available in materials which accommodate a heat range from —265°C/—450°F to 260°C/500°F for insulation purposes. It is also available in materials with high abrasion resistance and in materials for use outdoors where resistance to ultra-violet rays is required.

MATERIAL DESCRIPTION

Polyethylene	Versatile, low cost material
Polyethylene, black	In addition to above, this material is designed for outdoor use. It resists ultra-violet rays. Oper. Temp. —75°C/—105°F to 100°C/215°F.
Rulan (carbon impregnated polyethylene)	Used primarily in applications where a low cost self-extinguishing material is required. Oper. Temp. —25°C/—10°F to 95°C/200°F.
Nylon, natural	This material offers best mechanical protection; also has a higher temperature rating than polyethylene. Oper. Temp. —100°C/—150°F to 150°C/300°C.
Nylon, black	In addition to the above, this material is designed for outdoor use; it resists ultra-violet rays. Oper Temp. —100°C/—150°F to 110°C/230°F.
Teflon	Primarily used in high temperature applications; also has an extremely low operating temperature, excellent dielectric properties and is not affected by organic solvents or acids. Oper. Temp. —265°C/—450°F to 260°C/500°F.

Multiple Conductor Control Cables

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105°C per MIL-W-16878D Type C†. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black polyvinyl-chloride thermoplastic, meeting specification MIL-I-631 Class F, or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene jackets at added cost.)*

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

*(Standard put-up for Neoprene jacketed cable is 250 ft.)

†Insulated Conductors are also UL approved under UL type 1007 AWM, and are CSA approved as type TR 64.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on gauge and position.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.
